## PARTE B - ORGANIZAÇÃO INSTITUCIONAL EM 2015

## PARTE C – INFORMAÇÃO COMPLEMENTAR SOBRE A ATIVIDADE DOS CENTROS EM 2015

## PARTE D – DESTAQUES DA ATIVIDADE EM 2015

## 1 Introdução

O presente relatório tem por objetivo apresentar as realizações mais marcantes do INESC TEC durante o exercício de 2015, no quadro do contexto e da trajetória evolutiva da instituição. São apresentados indicadores de atividade, resultados tangíveis alcançados e é dado destaque às realizações mais importantes da instituição.

A vertente económico-financeira das atividades desenvolvidas pelo INESC TEC durante o ano de 2015 encontra-se refletida no Relatório e Contas do exercício.

O presente documento encontra-se organizado num corpo principal e anexos diversos.

O corpo principal (Parte A) descreve aspectos gerais e de síntese da atividade do INESC TEC em 2015, sublinhando e detalhando os mais pertinentes para uma apreciação global. Nesta secção são ainda incluídos os principais indicadores de atividade da instituição.

A Parte B apresenta a estrutura organizacional do INESC TEC, identificando as estruturas de apoio e descrevendo sucintamente os Centros de Investigação (o detalhe de cada centro é remetido para as respetivas páginas web).

Na Parte C autonomiza-se a atividade de cada Centro, através de diversos indicadores referentes a projetos, publicações e orientação de dissertações e teses.

Em complemento aos dados globais e indicadores fornecidos nas secções anteriormente referidas, na Parte D destaca-se a atividade mais importante desenvolvida pelo INESC TEC no ano de 2015, relevando a sua capacidade de investigação multidisciplinar de exceléncia internacional socialmente relevante e com impacto económico, muito em particular nas empresas de setores exportadores que competem nos mercados globais. Em evidência está também o papel do INESC TEC enquanto mediador no estreitamento de relações da universidade e do politécnico com o tecido empresarial, a administração pública e a sociedade. Esta compilação, que não pretende ser exaustiva, baseia-se em notícias e destaque extraídos do Boletim do INESC TEC (BIP), bem como em notas de imprensa divulgadas durante 2015.

## 2 Objetivos do Plano de Atividades para 2015

No início de 2015 a atividade do INESC TEC estava condicionada por um conjunto marcante de elementos de contexto, a saber:

- a reposição dos níveis de financiamento ao Laboratório Associado, na sequência da atribuição da classificação de Excelente na avaliação internacional levada a cabo pela FCT;
- o arranque do Programa H2020, após um forte investimento na elaboração de candidaturas;
- o arranque do novo Quadro Comunitário de Apoio (Programas Portugal 2020 e, em particular, Norte 2020), perspetivando oportunidades de projetos com empresas;
- a potencial instabilidade nas políticas de apoio à ciéncia (projetos FCT, bolsas de doutoramento, contratos pós-doc) decorrente de possíveis alterações governamentais.

Com esse cenário como pano de fundo, foram apresentadas e aprovadas na reunião de Conselho Geral (janeiro de 2015) as seguintes Linhas Mestras para o ano de 2015:

- consolidação do processo de integração dos novos Centros de I&D e de um modelo de partilha de custos indiretos;
- exploração do papel dos clusters no modelo organizacional e de governação;
- desenho de apostas estratégicas (TEC4X) caucionadas pela avaliação FCT, em áreas como mar, saúde, energia, etc.;
- aposta em novos projetos europeus (H2020) com início em janeiro de 2015;
- relançamento de candidaturas a projetos em co-promoção com empresas no âmbito do Portugal 2020 e Norte 2020;
- implementação de um novo modelo de parceria estratégica com empresas através de contratos-programa plurianuais (EDP, Kyaia, Biodevices);
- iniciativas orientadas para a implementação das estratégias regionais de especialização inteligente em parceria com a CCDR-N (alavancar nos Polos e Clusters e na P. NW Global);
- celebração dos 30 anos do INESC no Porto, com os associados e parceiros estratégicos, divulgando a relevância e o impacto da ciéncia nas empresas e na sociedade;
- implementação de alterações estatutárias, com o objetivo de flexibilizar o modelo de governação e facilitar a transição geracional dos quadros dirigentes.

### 3 Destaques dos resultados alcançados em 2015

Pode afirmar-se que os objetivos estabelecidos foram não só atingidos como claramente ultrapassados. De forma muito sucinta, podem relevar-se alguns factos marcantes do ano de 2015:

- um crescimento significativo (26%) do volume global de atividade, destacando-se os aumentos dos contratos de I&D com empresas e, muito em especial, dos projetos europeus;
- o habitual equilíbrio das fontes de financiamento, com 40% dos rendimentos provenientes de Programas Nacionais, 31% de Programa Europeus e 27% de Contratos de I&D com empresas, que permitiu a apresentação de contas equilibradas;
- a melhoria dos índices de produção científica globais, com um aumento da publicação em revistas e das publicações em conferências;
- um aumento significativo das atividades de transferência de tecnologia para o tecido empresarial e institucional, expresso no aumento dos projetos em consórcio, da atividade de I&D contratual, do licenciamento de tecnologia e do lançamento de empresas spin-off;
- um aumento de dimensão em recursos humanos (mais 66 colaboradores), totalizando 715 integrados, aos quais se juntam 215 com ligações mais ténues (investigadores colaboradores e alunos);
- investimentos de carácter estratégico em equipamento científico e laboratorial num valor próximo de 1 milhão de euros, aproveitando as oportunidades de financiamento disponíveis e suportando a parte não financiada com receitas próprias;
- consolidação de um modelo sustentável de financiamento baseado na diversidade e equilíbrio das fontes, o que permitiu diminuir em 25% as necessidades de financiamento à tesouraria, aumentar os meios libertos e diminuir os custos bancários;
- manutenção da diversidade na internacionalização dos recursos humanos, contando-se no final do ano 101 colaboradores, dos quais 7 pós-doc, sendo ainda estrangeiros cerca de 25% dos estudantes de doutoramento acolhidos no INESC TEC;
- alterações estatutárias e do modelo de governação da instituição, preparando-a para uma transição geracional que foi iniciada no final do primeiro semestre de 2015, com a eleição do novo Conselho de Administração em 8 junho.

## 4 Evolução do modelo de governação e gestão

Uma das mais importantes alterações estatutárias aprovadas pelo Conselho Geral foi a revisão do modelo de governo da instituição, que entretanto teve o nome alterado para INESC TEC, designação anteriormente adotada para o Laboratório Associado. A Direção de até cinco membros foi substituída por um Conselho de Administração de até nove membros, no âmbito do qual foi criada uma Comissão Executiva de três membros.

Este novo modelo permitiu a constituição de uma equipa alargada de gestão, juntando cinco novos administradores a quatro membros da anterior Direção. Estes cinco elementos, até à altura Responsáveis de Centro de Investigação, trouxeram todo o seu conhecimento da instituição, bem como novas visões e modos de fazer que se têm revelado de enorme utilidade na evolução do INESC TEC. Foi também alterada estatutariamente a duração do mandato dos órgãos sociais, de dois para três anos, tendo o Conselho Geral acordado entretanto recomendações com vista a orientar a futura renovação dos quadros dirigentes da instituição. Prossseguiu-se também com a renovação das lideranças dos Centros de Investigação, com a substituição progressiva dos responsáveis de Centro que passaram para o Conselho de Administração.

Foi de grande importância o trabalho de estabilização levado a cabo ao nível dos Serviços de Apoio, peças críticas de apoio à operação do INESC TEC e cuja eficiência e eficácia têm vindo a ser continuamente postas à prova pelo aumento de dimensão e de complexidade da instituição. A completa e suave integração das várias Unidades de I&D externas, trabalho meticoloso que demorou vários anos, muito se deveu à qualidade destes Serviços.

O aumento de dimensão do INESC TEC significou o aumento da massa crítica em quase todos os Centros de I&D, o que exigiu autonomia de decisão e ferramentas de gestão adequadas a esse nível, naturalmente acompanhadas por uma delegação de competências cuidadosamente desenhada, que foi também operacionalizada em 2015.

Foi ainda possível levar a bom termo dois dossieres delicados da vertente da gestão económica e financeira: a distribuição, pelos diferentes Centros, dos custos indiretos e também do financiamento plurianual atribuído pela FCT ao Laboratório Associado. O racional foi, em ambos os casos, construído através de um esforço de concertação e de diálogo com todos os Centros, resultando num modelo claro e transparente, flexível e de fácil operacionalização.

Finalmente, foram constituídos diversos grupos de trabalho envolvendo membros da administração e, sempre que necessário, consultores da administração e quadros que tomaram em mãos, ainda em 2015, dossieres de maior relevo no edifício organizacional do INESC TEC, designadamente:

- o modelo integrado de indicadores de desempenho;
- a criação dos Clusters;
- a política de gestão de conflitos de interesse;
- a política e regulamento da propriedade intelectual.

O desenvolvimento e a operacionalização destes instrumentos estenderam-se para 2016, havendo intenção de, em tempo oportuno, serem apresentados ao Conselho Geral.

## 5 Diversificação e equilíbrio de financiamentos

Como se pode constatar pela Tabela 1, o número de projetos em consórcio com empresas nacionais sofreu uma forte redução, em razão do fecho do QREN, tendo-se observado também, uma diminuição do número de projetos FCT.

Em compensação, em 2015, a Tabela 2 mostra que os projetos europeus atingiram um número recorde: 46 projetos em execução em simultâneo.

Programa	Ano					
	2010	2011	2012	2013	2014	2015
Nº projetos FCT	50	60	61	65	44	29
Nº projetos QREN	33	46	34	20	14	7
Nº projetos P2020						3
Nº projetos integrados				7	7	14

Tabela 1 – Número de projetos financiados pela FCT, pelo QREN e pelo P2020, desde 2010

Programa	Ano					
	2010	2011	2012	2013	2014	2015
FP6	2	1				
TEMPUS	1					
FP7	11	18	22	30	26	23
AAL	1	1	1			
CIP	2	3	2	1		
COST	2	3	1	2	3	1
INTER-REG	6	8	3	2	1	2
EEA Grants						5
H2020						12
Outros	1	2	1	1	1	3
Total	<b>26</b>	<b>36</b>	<b>30</b>	<b>36</b>	<b>31</b>	<b>46</b>

Tabela 2 – Número de projetos europeus em execução simultânea em cada ano, desde 2010

Em termos de financiamento de caráter estrutural, para além do financiamento plurianual da FCT ao Laboratório Associado, já garantido, surgiu a oportunidade de um financiamento adicional, no âmbito do Programa Regional Norte 2020, através de um concurso para Projetos Integrados de Investigação enquadrando atividades mais a montante da cadeia de valor (TRL 1 a 4). A mobilização generalizada dos investigadores do INESC TEC permitiu elaborar uma candidatura individual do INESC TEC (com três linhas nas áreas do Manufacturing, Media e Internet of Things) e duas candidaturas em consórcio (nas áreas da Saúde e do Mar). Estas candidaturas foram todas aprovadas, aumentando de forma significativa o financiamento das atividades de investigação, sobretudo a partir do primeiro semestre de 2016.

Apesar do aumento de financiamento da atividade através de programas nacionais (21%), um desempenho recorde, tanto nos serviços de I&D para empresas (aumento de 17%), como nos projetos europeus (aumento de 44%), permitiu assegurar o habitual modelo de financiamento diversificado e equilibrado. A contenção nos custos e o aumento de eficiência dos serviços e dos mecanismos de gestão interna permitiram ainda manter os custos indiretos em valores razoáveis, mesmo numa fase de transição e crescimento.

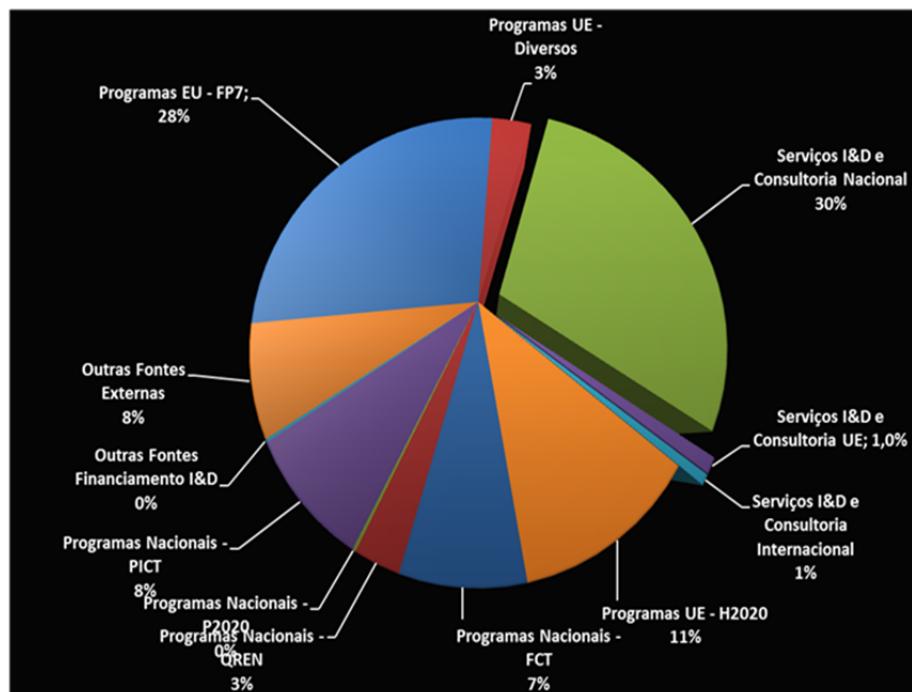

Figura 1 – Repartição de proveitos de projetos por origem de atividade

## 6 Resultados científicos

Na análise da produção científica, deve destacar-se o facto de se ter iniciado em 2015 uma contabilização de publicações com critérios mais exigentes do que os anteriormente adotados pela FCT, sendo agora excluídas publicações não indexadas por sistemas reconhecidos pela comunidade científica (ISI, Scopus, DBLP e outros).

Deste modo, e para permitir uma melhor comparação, apresentam-se nas Tabelas 3 e 4 os dados de 2010 a 2014 (assinalados com um asterisco), de acordo com os critérios anteriores, bem como os de 2015, conforme os novos critérios, acrescentando-se ainda os valores de 2014 que seriam contabilizados de acordo com a nova metodologia.

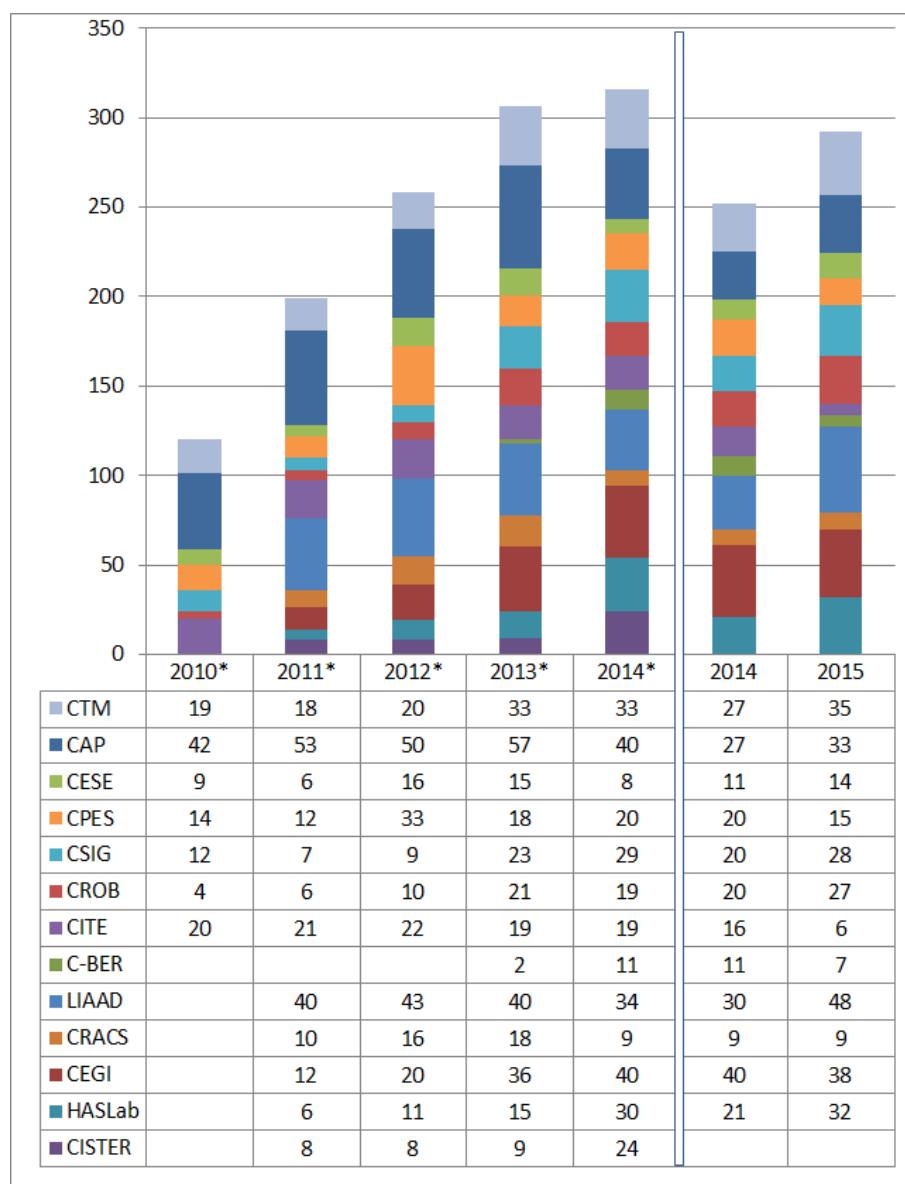

Tabela 3 – Evolução do volume de publicações em revistas internacionais desde 2010  
(anos com asterisco de acordo com metodologia anterior)

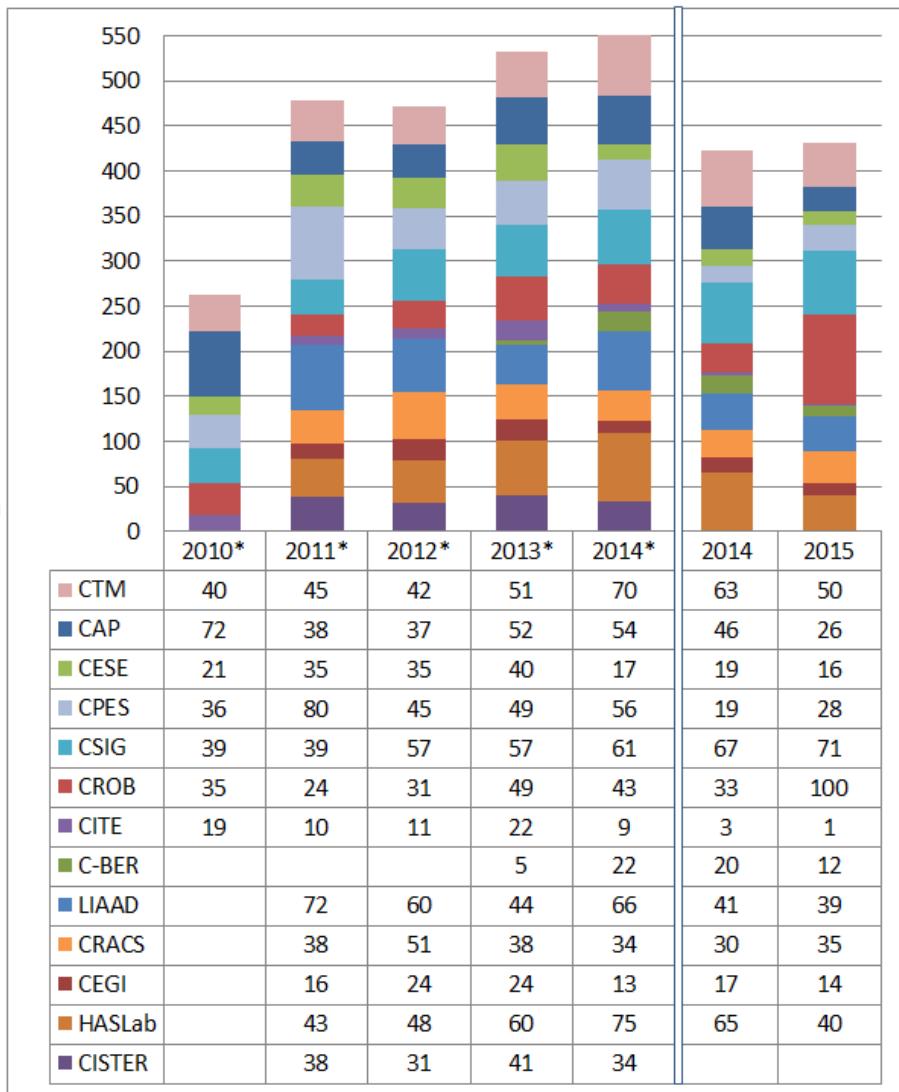

Tabela 4 – Evolução do volume de publicações em conferências internacionais desde 2010  
(anos com asterisco de acordo com metodologia anterior)

Considerando os Centros que em 2015 constituem a Unidade de I&D INESC TEC, excluindo o CISTER que se tornou independente, a produção científica de publicações em revista internacional aumentou de 16% (de 252 para 292), enquanto que o número de publicações em conferência internacional aumentou apenas ligeiramente (de 423 para 432). Pode observar-se uma variabilidade da produção científica dos diversos Centros, atribuível à especificidade das áreas científicas, ao ciclo normal de publicação e ao posicionamento das atividades na cadeia de valor.

As evidências do reconhecimento externo no plano científico são diversas, sendo de relevar a nível internacional:

- a atribuição ao pós-doc Sérgio Costa da Heizer Best Dissertation Award da Academy of Management- prémio reconhecido para a melhor tese de doutoramento em empreendedorismo do mundo;
- a atribuição a João Abel Peças Lopes do título de IEEE Fellow, distinção muito restrita da sociedade científica;
- o 1.º lugar no Eurathlon Grand Challenge (Itália).

A nível nacional, destaca-se a atribuição dos seguintes prémios:

- Prémio REN (1.º e 2.º lugares);
- Prémio APREN a investigadores do INESC TEC;
- Prémio atribuído pela AIP no evento da “Green Business Week” como instituição de referência na área das Energias Renováveis e a nomeação de João Abel Peças Lopes, como personalidade do ano na área das Energias Renováveis.

A estes reconhecimentos acresce um grande número de *best-paper awards* atribuídos a investigadores do INESC TEC em conferências internacionais e muitas outras distinções.

## 7 Valorização e transferência de conhecimento

A área de valorização e transferência de conhecimento teve uma atividade muito intensa em 2015, pelo facto de terem entrado em velocidade de cruzeiro diversos serviços de apoio à operação do INESC TEC nesta vertente, em particular o Serviço de Apoio ao Licenciamento (SAL). O SAL oferece os seus serviços na área da proteção e valorização da Propriedade Intelectual (PI) em diferentes fases da execução dos projetos de investigação, nomeadamente: negociação de acordos de consórcio e contratos de I&D, identificação de PI com potencial para proteção e licenciamento, submissão de pedidos de patente, internacionalização de patentes e negociação de contratos de licença. Os números, refletindo as dinâmicas de mercado nas áreas científicas e tecnológicas do INESC TEC, têm vindo a crescer, sendo que no ano de 2015, foram efetuados três pedidos provisórios de patente, dois processos de internacionalização (designadamente, recorrendo ao mecanismo previsto no Patent Cooperation Treaty - PCT) e cinco comunicações de invenção. Foram ainda fechadas sete licenças, uma das quais recorrendo a um esquema de licenciamento dual em software livre, estando outras oito em negociação através de contratos com opção de licenciamento.

O Serviço de Apoio às Parcerias Empresariais (SAPE) teve em 2015 um papel fundamental, com contributos determinantes no aumento da atividade em projetos, em particular na vertente de serviços de I&D mas também em projetos europeus. A intervenção do SAPE, muito forte na construção de parcerias empresariais a jusante no âmbito das Plataformas TEC4, também se fez sentir mais a montante no desenho de parcerias com instituições de I&D para a elaboração de candidaturas aos Projetos Integrados de I&D (Norte 2020) e aos Programas de Ação Conjunta (Portugal 2020), sendo que os resultados destas últimas candidaturas não são ainda conhecidos.

O modelo dos contratos-programa com empresas, entretanto desenhado, começou a ser operacionalizado. Com a EDP arrancaram em 2015 cinco projetos e foram também iniciadas as atividades de cooperação com a Kyaia e a Biodevices.

Na vertente de lançamento de spin-offs, o INESC TEC pré-incubou dois projetos empresariais: a LTP Labs, que arrancou no início de 2015 a MitMyNid no final mesmo ano.

## 8 Internacionalização

A quota da atividade em projetos europeus exibida na Figura 2 dá, por si só, uma ideia do nível de internacionalização da instituição. Os 46 projetos europeus em simultâneo evidenciam uma presença europeia muito forte, que se tem vindo a alargar em termos de áreas científicas e de parcerias. Parte deste posicionamento é devido à forte presença em *fora* internacionais, como na área da energia e da indústria transformadora (neste caso, de relevar um papel ativo na Plataforma Tecnológica Manufuture e na EFFRA – European Factories of the Future Research Association). Estas são apostas feitas há mais de uma década cujos resultados só são visíveis a médio-longo prazo.

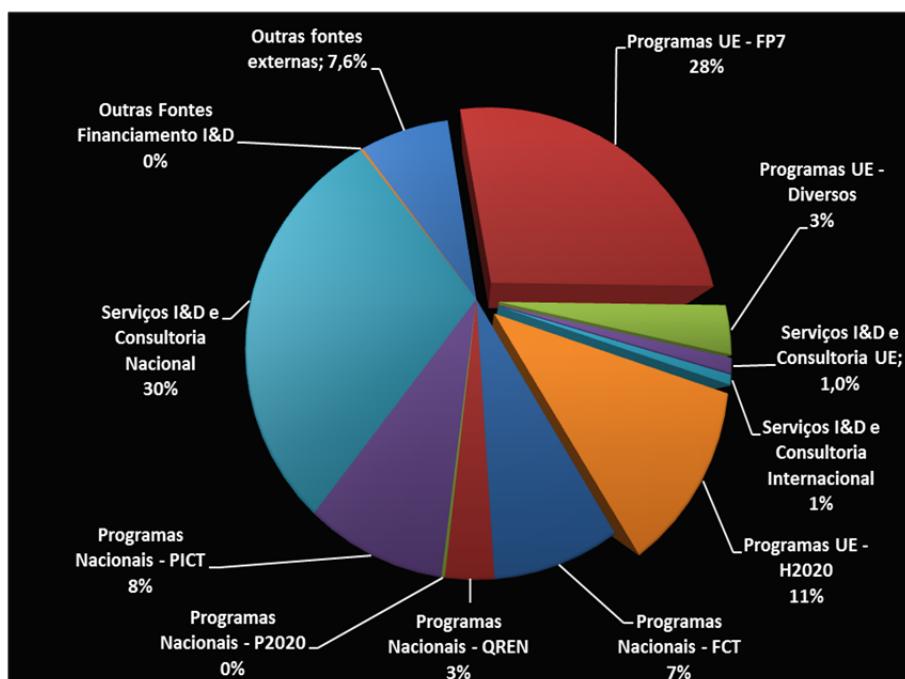

Figura 2 – Repartição de proveitos de projetos por origem de atividade, evidenciando a fração de 44% de origem internacional

Em 2015 foi possível colher os frutos de mais uma aposta estratégica deste tipo, com a entrada do INESC TEC numa candidatura a uma KIC (Knowledge and Innovation Community) na área dos Raw Materials que ganhou o concurso aberto pelo EIT (European Institute of Technology), sendo o único parceiro português. As reconhecidas competências em tecnologia robótica para mineração em minas abandonadas foram a razão do convite para fazer parte do consórcio internacional ganhador da referida KIC.

Também durante 2015 foi desenvolvido trabalho que conduziu à participação do INESC TEC numa candidatura a uma KIC em Added-Value Manufacturing, a submeter até julho 2016.

Tal como é habitual, a instituição acolhe várias Escolas de verão e 2015 não foi exceção. Visum, MAP Breast e ASCOS foram as iniciativas de caráter internacional mais marcante.

## 9 Contributos para as políticas públicas de Ciéncia, Tecnologia e Inovação

Os contributos para as políticas públicas fazem parte das competências dos Laboratórios Associados e o INESC TEC tem-se mantido ativo em muitas atividades pro-bono nessa vertente, oferecendo a sua competência científica e técnica e a independência que, em muitos casos, é elemento fundamental.

O acolhimento do Programa CMU Portugal, a colaboração com a InvestPorto na atração de investimento estrangeiro qualificado, a constituição do NEM (New European Media) Portugal, entre outros, são algumas das iniciativas de interesse público em que foi determinante o papel do INESC TEC em 2015.

Em fase de arranque do novo quadro comunitário de apoio, 2015 foi um ano de desenho e colocação no terreno de programas nacionais e regionais para financiamento de atividades de ciéncia e inovação com recurso a fundos estruturais. Assim, e tal como diversas vezes no passado, foi desenvolvida uma atividade intensa junto dos diferentes níveis de decisão e gestão desses programas, aportando a nossa vasta experiência de terreno para procurar sensibilizar os decisores sobre a necessidade imperiosa de minimizar a burocracia nos programas de apoio à ciéncia e à transferéncia de tecnologia. Os frutos (ainda que limitados) desse esforço, de que acabou por beneficiar toda a comunidade, encorajam-nos nessa missão difícil de levar a experiência da execução dos projetos e programas a quem tem a missão de desenhar e implementar as políticas públicas encontrando as melhores soluções, apesar dos espartilhos legais e burocráticos impostos.

## 10 Comunicação, coesão interna e imagem externa

### 10.1 Eventos 30 anos

Os eventos organizados no âmbito da comemoração dos 30 anos conferiram grande visibilidade e prestígio à instituição, tendo-se revelado instrumentos importantes para projetar a imagem do INESC TEC a um nível nacional e mostrar o seu impacto económico e social.

De destacar a produção de uma série de 30 documentários exibidos na televisão (RTP3 e RTP Internacional) e disseminados em multiplataforma, a estreia de um ciclo de fóruns INESC TEC – Fórum “INESC TEC do Outono”, que em 2015 se denominou “Economia, Investigação, Desenvolvimento e Inovação”, e ainda a conferência “Instituições de Interface no Sistema do Ensino Superior”, que abordou a intervenção destas instituições no desenvolvimento económico e social de Portugal.

Direcionado a um público mais jovem foi organizado, também no âmbito do 30º aniversário, “O Efeito Eureka”, um evento de caráter irreverente e *out of the box* vocacionado para estudantes de pós-graduação da U. Porto, aberto também à U.Minho, UTAD e IPP, que contou com concursos, *talks* e um desafio social.

Ainda enquadrado na comemoração dos 30 anos teve um impacto assinalável o concerto “a.bel – Nova Música Interativa”, uma estreia mundial que celebrou o impacto da tecnologia na música e reuniu cerca de 800 pessoas na Casa da Música.

De destacar ainda a colaboração com a Faculdade de Belas Artes da Universidade do Porto (FBAUP), materializada na exposição “Evidência da Imagem Tecnológica” com vertentes de fotografia, banda desenhada e intervenção de luz.

Com o objetivo de promover o convívio entre os colaboradores do INESC TEC e reforçar a coesão interna no ano da comemoração dos 30 anos, foi organizado um encontro aberto a famílias que juntou cerca de 250 pessoas na Quinta da Eira em Penafiel.

Não poderia fechar-se este breve sumário, sem destacar a pronta e forte adesão a este programa de celebrações dos 30 anos do INESC no Porto por parte dos associados, dos colaboradores da instituição e dos parceiros empresariais e institucionais. Fica aqui o nosso sincero agradecimento, em especial aos patrocinadores que tornaram possível, com o seu apoio financeiro, um programa desta ambição.

### 10.2 Assessoria de imprensa

Em 2015 os esforços empreendidos pelo Serviço de Comunicação no sentido de alcançar uma maior visibilidade nos órgãos de comunicação social originaram uma presença mais sustentada do INESC TEC nos principais media em Portugal. Um serviço de monitorização (clipping) contratado para o efeito contabilizou 882 notícias em 2015, mais 578 do que no ano anterior.

Verificando-se que, cada vez mais, os media recorrem aos investigadores para realizar entrevistas e reportagens, o Serviço de Comunicação organizou uma sessão de Media Training intitulada “Como Comunicar com Jornalistas” para reforçar as competências comunicacionais dos investigadores do INESC TEC.

### 10.3 Rebranding e comunicação externa

Com a alteração dos estatutos e da denominação do INESC Porto para INESC TEC em maio de 2015, deu-se um novo impulso no processo de rebranding, num esforço de eliminar referências ao INESC Porto nos mais diversos suportes, assumindo-se agora em definitivo a marca INESC TEC.

O BIP - Boletim do INESC TEC, disponível em português e inglês no website do INESC TEC e divulgado trimestralmente na sua versão inglesa para Universidades de 25 países, afirma-se como um dos instrumentos mais eficazes de que a instituição dispõe atualmente para comunicar com o exterior. Contagens de acessos ao BIP pelo sistema de geração de estatísticas AWStats permitem aferir o impacto real que este instrumento de comunicação tem. No ano de 2015, por exemplo, o BIP recebeu visitas de 139 países, sendo os mais frequentes Portugal, China, EUA, França, Brasil e Alemanha, num total de 475.908

páginas vistas e de 68.151 visitantes. É importante referir também a presença do INESC TEC nas Redes Sociais – Facebook, LinkedIn, YouTube e Twitter.

O Serviço de Comunicação atualiza a página web do INESC TEC em português e inglês com a inclusão frequente de notícias, eventos e notas de imprensa. Além disso, recebe e trata diariamente questões, pedidos e sugestões enviados através do website, alguns deles com potencial suficiente para se converterem em propostas efetivas de cooperação ou iniciativas conjuntas com empresas.

No âmbito do apoio aos Centros de I&D destacam-se as tarefas de definição de imagem corporativa e comunicação aplicadas a diversos projetos e ainda a produção de filmes promocionais.

#### **10.4 Eventos e visitas**

De destacar ainda em 2015 o apoio à participação do INESC TEC em eventos que promoveram a sua imagem no exterior, como foi o caso do Fórum do Ma, Green Business Week, Blue Business Forum, ICT 2015, ISAP 2015, Techdays Aveiro, Open Day CTM ou Workshop "Mobilidade, Transportes e Logística". O Serviço de Comunicação apoiou igualmente a organização de visitas de empresas/instituições ao INESC TEC.

De referir também o apoio à operacionalização dos patrocínios do INESC TEC a vários eventos, em particular as contrapartidas oferecidas aos patrocinadores, como a organização de stand institucional, produção de suportes de comunicação e angariação de oradores.

#### **10.5 Formação e Comunicação de Ciéncia**

Manteve-se igualmente o empenho na colaboração com a Ciéncia Viva na divulgação da ciéncia aos mais jovens, nomeadamente através do acolhimento de alunos na iniciativa Ocupação Científica nas Férias – Jovens Ciéncia Viva nos Laboratórios para um estágio científico intitulado "À descoberta do meu lado empreendedor".

De destacar ainda, entre as atividades de sensibilização dos jovens para a área da ciéncia – vertente de Comunicação De Ciéncia –, a participação institucional em eventos como a Semana Profissão Engenheiro da FEUP e a Mostra da U.Porto.

Em 2015 foram acolhidos no Serviço de Comunicação três estudantes do 4º ano do curso de Design de Comunicação da Faculdade de Belas Artes da Universidade do Porto (FBAUP), no âmbito do protocolo estabelecido há vários anos com aquela instituição de ensino.

#### **10.6 Comunicação interna e apoio a colaboradores**

Com o objetivo de reforçar a coesão interna, o Serviço de Comunicação continuou a promover em 2015 a realização de atividades de grupo, tais como o concurso de fotografia, torneio de futebol, magusto e convívio de Fim de Ano com lanche multicultural.

Assume ainda a tarefa de esclarecer dúvidas e validar o correto uso dos logótipos obrigatórios e das referéncias aos fundos de financiamento aplicadas a artigos, publicações e outros documentos de divulgação, tais como atas, anúncios, cartazes, folhetos de divulgação, revistas ou monografias.

Por último, importa referir o projeto de seguimento da trajetória dos antigos colaboradores do INESC TEC nas empresas nacionais e internacionais. O CONNECT INESC TEC junta em rede, visível para o exterior através de um website e de página no LinkedIn, 258 antigos colaboradores, espalhados por 23 países, que podem manter-se atualizados sobre as novidades do INESC TEC e comunicar entre si.

## 11 Dados consolidados institucionais e das atividades em 2015

### 11.1 Recursos Humanos

#### 11.1.1 Indicadores de Recursos Humanos em 31 dezembro 2015

O quadro seguinte mostra a estrutura de recursos humanos afetos ao INESC TEC, com desagregação por estrutura organizativa interna e tipo de ligação.

Estrutura Organizativa Interna		Tipo de Ligação										Investigadores Colaboradores	Estudantes Formação Inicial	Total Global			
		Recursos Humanos Integrados															
		I&D				Estrutura (Central e Local)											
		Contratados	Docentes Ensino Superior	Bolseiros e Estagiários	Total I&D	Contratados	Bolseiros e Estagiários	Estrutura Outros	Total Estrutura	Total Integrados

### 11.1.2 Evolução Anual de Indicadores de Recursos Humanos

O quadro seguinte evidencia particularmente a estabilização do número de recursos humanos integrados nos últimos anos, em conformidade com as explicações de evolução da atividade fornecidas noutras secções deste relatório.

Tipo de ligação	Número em Dezembro 2013	Número em Dezembro 2014	Número em Dezembro 2015	Variação (*)
Docentes do Ensino Superior	222	212	211	-1
Contratados	102	100	108	8
Bolseiros	341	387	387	0
Outros	138	165	224	59
<b>Total</b>	<b>803</b>	<b>864</b>	<b>930</b>	<b>66</b>

### 11.2 Atividade Contratual

Nas secções seguintes, apresentam-se os indicadores consolidados da atividade contratual que decorreu em 2015 no âmbito do INESC TEC. A atividade da Unidade Associada CISTER está apenas reportada na informação complementar que integra a Parte C.

#### 11.2.1 Projetos com Atividade durante o ano de 2015

*Número de Projetos com Atividade em 2015*  
(Fonte de Financiamento vs. Tipo de Atividade Dominante)

Fonte de Financiamento	Tipo de Atividade Dominante								Total

### 11.3 Publicações

A tabela seguinte sintetiza as publicações de 2015 que incluem autores do INESC TEC, evidenciando ainda a variação relativa ao ano anterior.

*Quadro resumo de publicações*

Tipo de publicação	Número
Artigos em Revistas Internacionais com Júri	276
Atas de conferências Internacionais em eventos com júri e seleção	414
Livros (autor)	7
Capítulos em Livros	35
Publicações (editor)	14
Outras Publicações	38
<b>Total</b>	<b>784</b>

(\*) Relativamente ao ano anterior

### 11.4 Dissertações

A tabela seguinte mostra o número de pós-graduações concluídas em 2015 por membros do INESC TEC.

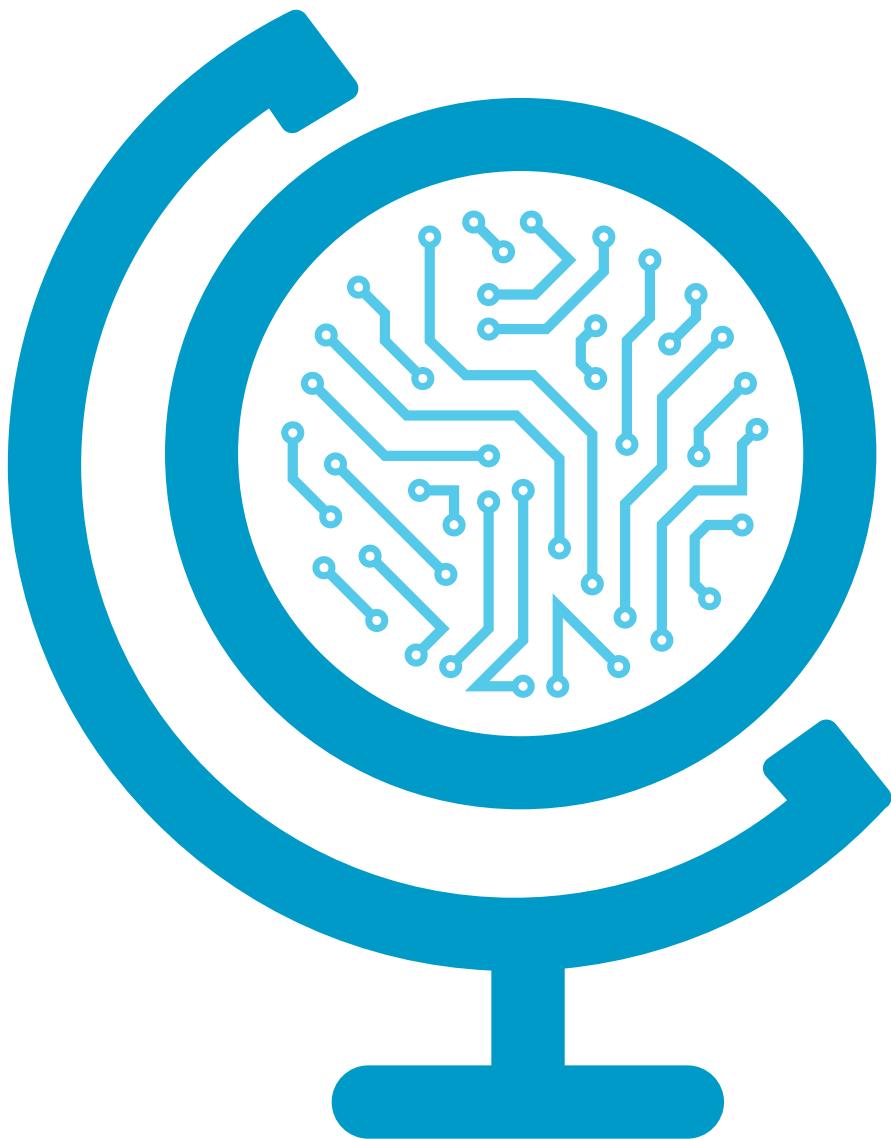

*Quadro resumo de pós-graduações*

Tipo	Concluídas
Mestrados	453
Doutoramentos	66
<b>TOTAL</b>	<b>519</b>

### 11.5 Pré-incubação de projetos empresariais

A atividade na área da pré-incubação de empresas/negócios de base tecnológica, na vertente do apoio ao empreendedorismo, é realizada pelo Let-In, Laboratório de Empresas Tecnológicas.

Durante 2015 o Let-in incubou a empresa LPTLABs e apoiou o desenvolvimento da prova de conceito e lançamento de uma nova spin off, MITMYNID. Como parceiro do consórcio português da rede EEN-Portugal e no âmbito do projeto EEN-Innovation, o Let-in apoiou 15 empresas *start up* em fase de *scalling up*, na implementação de processos internos de gestão da inovação.

## 1. Dados institucionais do INESC TEC

Tipo de Instituição: Associação privada sem Fins Lucrativos declarada de Utilidade Pública (declaração de utilidade pública em 19/06/2001)

### Associados:

- Universidade do Porto (engloba as anteriores participações da FCUP e da FEUP (55,78%)
- INESC – Instituto de Engenharia de Sistemas e Computadores (33,33%)
- Instituto Politécnico do Porto (10,89%)
- Património Associativo: 1.515.000 €
- Site Internet: [www.inesctec.pt](http://www.inesctec.pt)

## 2. Localização física

### Sede:

Campus da FEUP  
Rua Dr. Roberto Frias,  
4200-465 Porto  
Telef.: 222 094 000  
Fax: 222 094 050

Além de Edifícios na FEUP – Faculdade de Engenharia da Universidade do Porto, o INESC TEC tem ainda Polos na FCUP – Faculdade de Ciências da Universidade do Porto, no ISEP – Instituto Superior de Engenharia do Porto, na UTAD – Universidade de Trás-os-Montes e Alto Douro e na UM - Universidade do Minho.

## 3. Objetivos gerais estatutários

De acordo com a redefinição do seu objeto e atribuições no contexto da alteração dos seus Estatutos em 28 de maio de 2015, o INESC TEC tem visa potenciar a intervenção das instituições suas associadas no desenvolvimento do tecido económico e social, contribuindo para melhorar o desempenho, aumentar a competitividade e alargar o nível de internacionalização das empresas e instituições, através da realização de atividades de investigação científica, de desenvolvimento tecnológico, de transferência e valorização de conhecimento, de qualificação de recursos humanos e de consultoria especializada, tendo como base os domínios nucleares da engenharia eletrotécnica e de computadores e das ciências da computação, com extensão a áreas em que aqueles domínios são relevantes, como a física, a bioengenharia, o ambiente, a gestão e a inovação.

A escolha criteriosa de áreas de intervenção onde possa pautar a sua ação por critérios de excelência científica, inovação, internacionalização e impacto no tecido económico e social, mormente através do

estabelecimento de parcerias estratégicas, é encarada pelo INESC TEC como condição fundamental para a realização da sua missão.

Neste enquadramento, o INESC TEC tem como atribuições:

- Fomentar a utilização de tecnologias avançadas por empresas e instituições, sensibilizando-as para os seus benefícios e apoando-as na sua implementação, através de consultoria, desenvolvimento de soluções, teste laboratorial, demonstração e formação;
- Transferir conhecimento e soluções inovadoras para as empresas fornecedoras de produtos e serviços de base tecnológica, contribuindo para a sua evolução e para a melhoria da sua oferta;
- Contribuir para a formação de recursos humanos altamente qualificados para o mercado de trabalho, numa perspetiva de complementaridade em relação às instituições de ensino superior, quer através do seu envolvimento em projetos, quer apoiando a realização de estágios, mestrados e doutoramentos integrados nas atividades do INESC TEC;
- Promover a transferência de conhecimentos e a colaboração entre o INESC TEC e o ensino superior, através do envolvimento de docentes e alunos do ensino superior em projetos e atividades conjuntos;
- Estabelecer contratos-programa com entidades públicas ou privadas, visando intervenções estruturadas e programáticas de médio prazo;
- Publicar os resultados da investigação a que se dedica e difundir a cultura científica e tecnológica nas suas áreas de atuação;
- Permutar informações científicas e técnicas com outras instituições afins;
- Promover iniciativas orientadas para o debate sobre experiências e inovações introduzidas no campo da investigação científica e tecnológica, organizando colóquios, seminários, grupos de estudos ou quaisquer outras formas de trabalho coletivo.

#### 4. Laboratório Associado INESC TEC

O INESC TEC – INESC Tecnologia e Ciéncia tem o estatuto de Laboratório Associado reconhecido pela FCT – Fundação para a Ciéncia e Tecnologia, agregando nesta qualidade 12 Centros de I&D e uma Unidade Associada denominada CISTER - Centro de Investigação em Sistemas Computacionais Embebidos e de Tempo-Real, esta última gozando de autonomia de governo e não assimilação jurídica.

#### 5. Modelo de organização

Com a alteração dos seus Estatutos, o INESC Porto alterou a sua designação para INESC TEC, demarcando-se da sua circunstância geográfica para abraçar novos desafios mais globais e à altura da sua ambição.

No âmbito dessa alteração dos Estatutos, também o modelo de organização da instituição foi alterado. A organização do INESC TEC passou a incluir um Conselho de Administração, uma Comissão Executiva, e Adjuntos do Conselho de Administração. Mantêm-se inalterados os Serviços de Apoio, constituídos pelos Serviços de Organização e Gestão, Serviços de Desenvolvimento de Negócio e Serviços de Apoio Técnico bem como as estruturas produtivas compostas por 12 Centros de I&D.

Fazem ainda parte da organização da instituição o Conselho de Centros do INESC TEC, como órgão não estatutário, o Conselho Científico a Comissão de Acompanhamento Científico e a Comissão de Acompanhamento Empresarial – esta última ainda por constituir - como órgãos estatutários.

### 5.1 Conselho Científico

Enquanto órgão estatutário de carácter consultivo, o Conselho Científico do INESC TEC tem como missão estatutária o acompanhamento, orientação e avaliação internos das atividades de carácter científico e técnico, competindo-lhe:

- Pronunciar-se sobre a organização geral das atividades científicas do INESC TEC;
- Analisar e discutir a política científica da instituição e fazer propostas ao Conselho de Administração a esse respeito;
- Monitorizar a atividade e produção científica e fazer propostas ao Conselho de Administração a esse respeito;
- Apresentar ao Conselho de Administração propostas, no âmbito das suas atribuições, sobre quaisquer aspectos relacionados com as atividades do INESC TEC;
- Desempenhar outras funções de gestão científica que lhe sejam confiadas quer pelo Conselho de Administração, quer pelo Conselho Geral.

A organização do Conselho Científico resulta diretamente da estruturação da atividade pelas doze áreas correspondentes aos Centros. Assim, cada Centro tem o seu próprio Conselho Científico interno, constituído por todos os doutorados. O Conselho Científico do INESC TEC, por sua vez, é constituído por um representante efetivo de cada Centro e dois membros designados pelo Conselho de Administração, e ainda alguns membros suplentes, sendo os membros e o respetivo Presidente eleitos pelo Conselho Geral, sob proposta do Conselho de Administração.

Sempre que necessário o Conselho poderá reunir com a extensão ao Laboratório Associado incluindo assim a representação da Unidade CISTER.

O relatório de atividades do Conselho Científico integra o Relatório de Atividade dos Centros.

### 5.2 Comissão de Acompanhamento Científico

O INESC TEC tem uma Comissão de Acompanhamento Científico (*SAB - Scientific Advisory Board*) que, inclui individualidades externas, nomeadamente cientistas portugueses residentes no estrangeiro e outros membros da comunidade científica internacional. A esta Comissão compete analisar regularmente o funcionamento do INESC TEC e emitir parecer sobre os planos e relatórios de atividades,

bem como analisar criticamente a atividade de I&D, produzindo relatórios periódicos que constituem elementos essenciais de avaliação-correção da estratégia científica da instituição.

### 5.3 Comissão de Acompanhamento Empresarial

Criada na revisão dos Estatutos de 2015, a Comissão de Acompanhamento Empresarial (*BAB – Business Advisory Board*) será um órgão de carácter consultivo composto por personalidades de reconhecida competência nos setores da economia relevantes para as atividades do INESC TEC. Assim que constituída, competir-lhe-á pronunciar-se e fazer propostas sobre as atividades de ligação às empresas do INESC TEC, nomeadamente nas vertentes de inovação, transferência de tecnologia e formação de recursos humanos para o mercado de trabalho, bem como sobre quaisquer assuntos afins que lhe sejam submetidos pelo Conselho de Administração, salvaguardando as garantias de confidencialidade institucional e de respeito pelas regras da concorrência.

### 5.4 Conselho de Centros do INESC TEC (CCI)

O conjunto de responsáveis dos Centros reúne quinzenalmente com o Conselho de Administração do INESC TEC num fórum caracterizado pela sua informalidade e discussão aberta sobre diversos assuntos. Ainda que não seja um órgão estatutário, este Conselho constitui uma das bases da cadeia de decisão adotada no INESC TEC, contando também com a presença dos responsáveis de vários serviços de apoio administrativo e técnico.

A este nível são tratados todos os assuntos de despacho corrente, gestão orçamental e assuntos de carácter institucional, tendo a experiência demonstrado ser uma estrutura relativamente leve e eficaz, bem como um fórum essencial de partilha de informação e discussão de problemas e desafios da instituição.

### 5.5 Administração e Serviços de Apoio

Os Serviços de Apoio incluem quinze estruturas, com um total de trinta e três contratados e sete bolseiros (nímeros a 31/12/2015):

- Serviços de Organização e Gestão
  - Apoio Jurídico (AJ)
  - Contabilidade e Finanças (CF)
  - Controlo de Gestão (CG)
  - Recursos Humanos (RH)
  - Apoio à Gestão (AG)
  - Coordenação do Secretariado
- Serviços de Desenvolvimento de Negócio
  - Serviços de Apoio a Parcerias Empresariais (SAPE)
  - Serviço de Apoio ao Licenciamento (SAL)
  - Serviço de Apoio à Angariação de Financiamentos (SAAF)
  - Gabinete Brasil (GB)

- Serviços de Apoio Técnico

- Serviço de Comunicações e Informática (SCI)
- Serviço de Informática de Gestão (SIG)
- Serviço de Gestão de Infraestruturas (SGI)
- Serviço de Comunicação (SCOM)
- Serviço de Biblioteca e Documentação (SBD)

De observar que tem sido possível fazer face ao grande crescimento da instituição, mantendo controlada a dimensão dos serviços de apoio, e apenas com um aumento marginal tornado inevitável por este acentuado crescimento da instituição.

### 5.5.1 Serviços de Organização e Gestão

#### 5.5.1.1 Apoio Jurídico (AJ)

Responsável: Maria da Graça Barbosa  
Recursos Humanos: duas pessoas (um bolseiro)

O serviço de Apoio Jurídico assegura a assessoria jurídica e a intervenção técnica relativamente a todas as questões de índole jurídica emergentes no universo INESC TEC, nomeadamente nas áreas de recursos humanos, de relacionamento institucional, de contratualização de projetos e de contratação pública de bens e serviços, visando a defesa dos interesses institucionais quer numa ótica preventiva, conformando as atividades que a instituição prossegue com o quadro legislativo nacional e comunitário, ou outro aplicável, quer numa ótica de reparação, minimizando eventuais danos e custos.

#### 5.5.1.2 Contabilidade e Finanças (CF)

Responsável: Paula Faria  
Recursos Humanos: sete pessoas (dois bolseiros)

O serviço de Contabilidade e Finanças tem por missão a gestão financeira do instituto, a coordenação e execução das atividades contabilísticas e o cumprimento das demais obrigações de cariz fiscal, assegurando neste contexto a mediação entre o instituto e os seus interlocutores externos, de acordo com as orientações da Administração. A gestão de compras, imobilizado, viagens e seguros são igualmente assumidos por este serviço.

#### 5.5.1.3 Controlo de Gestão (CG)

Responsável: Marta Barbas  
Responsável Adjunta: Vanda Ferreira  
Recursos Humanos: sete pessoas

O serviço de Controlo de Gestão tem por missão a coordenação e execução das atividades inerentes ao planeamento e controlo orçamental e à produção, coordenação e disseminação da informação de gestão, por forma a assegurar que os recursos são obtidos e usados eficazmente e eficientemente no

cumprimento dos objetivos da instituição. Este serviço inclui ainda a função de acompanhamento da gestão financeira dos projetos.

#### 5.5.1.4 Recursos Humanos (RH)

Responsável: Maria da Graça Barbosa

Responsável adjunta: Margarida Gonçalves

Recursos Humanos: quatro pessoas, uma delas afeta parcialmente

O serviço de Recursos Humanos tem por missão a coordenação e execução de todas as atividades inerentes à gestão administrativa dos recursos humanos e à implementação das políticas com eles relacionadas, de acordo com a lei aplicável, as normas internas e as orientações da Administração.

#### 5.5.1.5 Apoio à Gestão (AG)

Responsável: Maria da Graça Barbosa

Recursos Humanos: duas pessoas, uma delas afeta parcialmente

A função de Apoio à Gestão da Estrutura Central tem por missão promover a articulação entre a administração, os centros e os serviços de apoio, assegurando a integração de processos com vista a garantir, numa ótica de melhoria contínua, uma resposta coordenada por parte da instituição. Atua ainda na preparação e operacionalização das decisões da competência da Administração do INESC TEC, nomeadamente mediante o secretariado ou apoio administrativo a vários órgãos decisores da instituição.

#### 5.5.1.6 Coordenação do Secretariado

Responsável: Lídia Vilas Boas, afeta parcialmente

Tem por missão coordenar o secretariado dos Centros e Serviços, por forma a garantir a coerência nos procedimentos típicos dessa função, bem como assegurar a homogeneidade e controlar o cumprimento de normas e procedimentos internos, em estreita articulação com os vários serviços de organização e gestão.

### 5.5.2 Serviços de Desenvolvimento de Negócio

Os Serviços de Desenvolvimento e Negócio apoiam a Administração em diversas vertentes estratégicas, como a potenciação do desenvolvimento de novos negócios, a dinamização interna da valorização e transferência de tecnologia e o reforço da prospeção e do apoio a candidaturas.

#### 5.5.2.1 Serviço de Apoio a Parcerias Empresariais (SAPE)

Responsável: Augustin Olivier

Recursos Humanos: quatro pessoas, dois deles afetos parcialmente

O Serviço de Apoio a Parcerias Empresariais tem como missão reforçar a capacidade de oferta de serviços de I&D e consultoria especializada do INESC TEC, tirando nomeadamente vantagem da interdisciplinaridade existente na instituição. Para tal, deve promover uma articulação com os elementos dos diversos Centros, focando-se principalmente na criação de novas oportunidades de negócio em áreas emergentes e na angariação de novos projetos que envolvam competências de vários Centros.

#### 5.5.2.2 Serviço de Apoio ao Licenciamento (SAL)

Responsável: Catarina Maia

Recursos Humanos: três pessoas (dois bolseiros)

O Serviço de Apoio ao Licenciamento tem como principal missão a proteção e o licenciamento de tecnologias do INESC TEC, colaborando de forma estreita com o Apoio Jurídico, o Serviço de Apoio às Parcerias Empresariais, e o CITE. Nesse sentido, o serviço é responsável por estabelecer e gerir os processos de: prospeção interna e comunicação de resultados de investigação passíveis de proteção por direitos de propriedade intelectual; avaliação de estado da arte e de mercado; definição de estratégia de propriedade intelectual; colocação de tecnologia em licenciadores; e negociação e monitorização de contratos de licenciamento.

#### 5.5.2.3 Serviço de Apoio à Angariação de Financiamentos (SAAF)

Responsável: Marta Barbas

Recursos Humanos: duas pessoas, afetas parcialmente

Autonomizado da área de Controlo de Gestão, o Serviço de Apoio à Angariação de Financiamentos tem por missão identificar as oportunidades de acesso aos financiamentos necessários e adequados às atividades de Investigação, Desenvolvimento e Inovação, alinhadas com a missão e com os objetivos estratégicos da instituição. Este serviço deve ainda acompanhar a elaboração e submissão de propostas aos diferentes programas de financiamento em articulação com os Centros de I&D e com os restantes Serviços de Desenvolvimento de Negócio.

#### 5.5.2.4 Gabinete Brasil (GB)

Responsável: Vladimiro Miranda

O Gabinete Brasil foi constituído para organizar de forma sistemática e regular a operação de internacionalização no Brasil, com especial enfoque na identificação de oportunidades, na negociação de contratos e no acompanhamento da execução destes projetos.

### 5.5.3 Serviços de Apoio Técnico

#### 5.5.3.1 Serviço de Comunicações e Informática (SCI)

Responsável: João Neves

Recursos humanos: quatro pessoas (um bolseiro)

O Serviço de Comunicações e Informática é responsável pela gestão da rede de comunicações e pelo parque informático.

#### 5.5.3.2 Serviço de Informática de Gestão (SIG)

Responsável: José Carlos Sousa

Recursos humanos: três pessoas

O Serviço de Informática de Gestão é responsável pela conceção, desenvolvimento e operação das aplicações de gestão e de informação da instituição.

#### 5.5.3.3 Serviço de Gestão de Infraestruturas (SGI)

Recursos humanos: cinco pessoas, duas delas afetas parcialmente

Garante as funções genéricas de operação e manutenção dos edifícios, bem como o apoio logístico.

#### 5.5.3.4 Serviço de Comunicação (SCOM)

Responsável: Sandra Pinto

Recursos humanos: quatro pessoas (dois bolseiros)

Garante as funções de coordenação e gestão da comunicação interna e externa.

#### 5.5.3.5 Serviço de Biblioteca e Documentação (SBD)

As funções de gestão da documentação são asseguradas pela Biblioteca da FEUP, com o apoio de um elemento do secretariado do INESC TEC.

### 5.6 Estruturas Produtivas

As atividades de I&D desenvolvidas no INESC TEC são organizadas em doze grandes áreas de intervenção, designadas genericamente como Centros de I&D, de acordo com os seguintes princípios:

- cada área de intervenção deve corresponder a um conjunto estruturado de competências tecnologicamente avançadas, reconhecidas nacional e internacionalmente e, simultaneamente, a uma capacidade real de aplicação dessas competências e tecnologias, de forma inovadora;
- cada Centro, deve ser globalmente sustentável, compreendendo uma combinação de atividades de I&D, de desenvolvimento de tecnologia e de prestação de serviços;
- cada Centro deve ter capacidade autónoma de definição de estratégias científicas, assim como de angariação, implementação e gestão de projetos.

Os 12 Centros de I&D do INESC TEC combinam capacidades de I&D e de intervenção no tecido económico (transferência de tecnologia) e são os seguintes:

- CESE: Centro de Engenharia de Sistemas Empresariais
- CAP: Centro de Fotónica Aplicada
- CPES: Centro de Sistemas de Energia
- CSIG: Centro de Sistemas de Informação e de Computação Gráfica
- CTM: Centro de Telecomunicações e Multimédia
- CITE: Centro para a Inovação, Tecnologia e Empreendedorismo
- CROB: Centro de Robótica e Sistemas inteligentes
- C-BER: Centro de Investigação em Engenharia Biomédica
- LIAAD: Laboratório de Inteligência Artificial e Apoio à Decisão
- CRACS: Centro de Investigação em Sistemas Computacionais Avançados
- CEGI: Centro Engenharia e Gestão Industrial
- HASLab - Laboratório de Software Confiável

O modelo organizativo interno de cada uma destas estruturas é diverso, como resultado da sua dimensão, das especificidades das respetivas áreas de intervenção e da qualificação do seus recursos humanos. No entanto, cada Centro tem um Conselho de Coordenação para partilha das decisões operacionais e estratégicas, com vista a descentralizar a sua gestão e potenciar, internamente, princípios de transparência e subsidiariedade.

#### **5.6.1 CESE: Centro de Engenharia de Sistemas Empresariais**

Desenvolve a sua atividade nas áreas de Produção (sistemas de informação avançados de apoio à gestão industrial, gestão da qualidade, gestão da manutenção, sistemas de planeamento e controlo da produção, racionalização e otimização dos processos produtivos, automação, sistemas de apoio à decisão) e Logística (sistemas de gestão de cadeias de fornecimento, planeamento de sistemas logísticos, integração e otimização de estruturas logísticas).

Coordenadores: Jorge Pinho de Sousa e Luís Carneiro

Site Internet: <http://www.inesctec.pt/cese>

#### **5.6.2 CAP: Centro de Fotónica Aplicada**

Desenvolve a sua atividade na área da Optoeletrónica, principalmente no campo da tecnologia das fibras ópticas. Está orientada para a investigação aplicada e desenvolvimento nas áreas das fontes em fibra ótica, comunicações ópticas, sensores em fibra e microfabricação (filmes finos e ótica integrada), procurando também oportunidades para a transferência de tecnologia para a indústria portuguesa através das suas competências específicas em optoeletrónica e integração de sistemas eletrónicos.

Coordenador: Paulo Marques

Coordenador Adjunto: Ireneu Dias

Site Internet: <http://www.inesctec.pt/cap>

### 5.6.3 CPES: Centro de Sistemas de Energia

Exerce a sua atividade em áreas emergentes essenciais para o setor elétrico: regulação e mercados de eletricidade, integração de produtores independentes dispersos (nomeadamente energia eólica e outras renováveis), gestão técnica e económica de sistemas de distribuição, uso de SIG e outras TI no planeamento energético regional, tratamento da incerteza e risco.

Coordenador: Manuel Matos

Site Internet: <http://www.inesctec.pt/cpes>

### 5.6.4 CSIG: Centro de Sistemas de Informação e de Computação Gráfica

Estuda, desenvolve e promove soluções integradas no campo dos sistemas de informação e comunicação. O Centro realiza diversos tipos de atividades nomeadamente: desenvolvimento, transferência de tecnologia, consultadoria, auditoria e formação. Estas atividades decorrem em vários setores, salientando-se as telecomunicações, autarquias, indústria, comércio, saúde e administração central e regional.

Coordenadores: Ângelo Martins e António Gaspar

Site Internet: <http://www.inesctec.pt/csig>

### 5.6.5 CTM: Centro de Telecomunicações e Multimédia

Atua em áreas chave no âmbito das redes e serviços de comunicação, em especial arquiteturas de redes, serviços de telecomunicações, processamento de sinal e imagem, microeletrónica, TV digital e multimédia.

Coordenadores: Manuel Ricardo e Augustin Olivier

Site Internet: <http://www.inesctec.pt/ctm>

### 5.6.6 CITE: Centro para a Inovação, Tecnologia e Empreendedorismo

Tem como missão criar, aprofundar e difundir práticas de valorização do conhecimento, atuando diretamente: nos processos de Gestão da Inovação; dinamizando e apoiando as atividades de Empreendedorismo (incluindo o social); desenvolvendo atividades de I&D nas áreas da Gestão da Inovação, Transferência de Tecnologia e Empreendedorismo, Inovação e Processos de Internacionalização de empresas, Inovação e Responsabilidade Social empresarial.

Coordenadores: Alexandra Xavier e João Claro

Site Internet: <http://www.inesctec.pt/cite>

### 5.6.7 CROB: Centro de Robótica e Sistemas Inteligentes

Trabalha no desenvolvimento de conhecimento, conceção e implementação de soluções inovadoras nos domínios da robótica terrestre, robótica aquática, robótica industrial e dos sistemas inteligentes.

Coordenadores: António Paulo Moreira e Eduardo Silva

Site Internet: <http://www.inesctec.pt/crob>

#### **5.6.8 C-BER: Centro de Investigação em Engenharia Biomédica**

Tem como missão promover conhecimento através de investigação aplicada, formação avançada e inovação em Engenharia Biomédica, nomeadamente nas três seguintes áreas: BioInstrumentação, Imagem Biomédica e NeuroEngenharia. Coordenadores : João Paulo Cunha e Aurélio Campilho

Site Internet: <http://www.inesctec.pt/cber>

#### **5.6.9 LIAAD: Laboratório de Inteligência Artificial e Apoio à Decisão**

Centra a sua atividade em sistemas de apoio à decisão, com particular ênfase nas técnicas de data mining, previsão, modelação adaptativa e otimização, com aplicações em marketing, finanças, escalonamento de processos, saúde, extração de informação de texto, e muitas outras áreas.

Coordenador: Alípio Jorge

Site Internet: <http://www.inesctec.pt/liaad>

#### **5.6.10 CRACS: Centro de Investigação em Sistemas Computacionais Avançados**

Desenvolve a sua atividade nas áreas de linguagens de programação, computação paralela e distribuída, data mining, sistemas inteligentes e arquitetura de software, com ênfase na resolução de problemas concretos em áreas de colaboração multidisciplinar, tais como Biologia, Medicina e Química.

Coordenador: Fernando Silva

Site Internet: <http://www.inesctec.pt/cracs>

#### **5.6.11 CEGI: Centro de Engenharia e Gestão Industrial**

Centra a sua atividade na fronteira entre a Engenharia, a Gestão e as Ciências Sociais, com o objetivo de identificar processos, técnicas e indicadores de eficiência das instituições. Na base da estratégia desta unidade está o conceito ‘problem-driven research’, que implica o desenvolvimento de soluções ajustadas às necessidades de cada empresa/instituição.

Coordenador: Bernardo Almada-Lobo

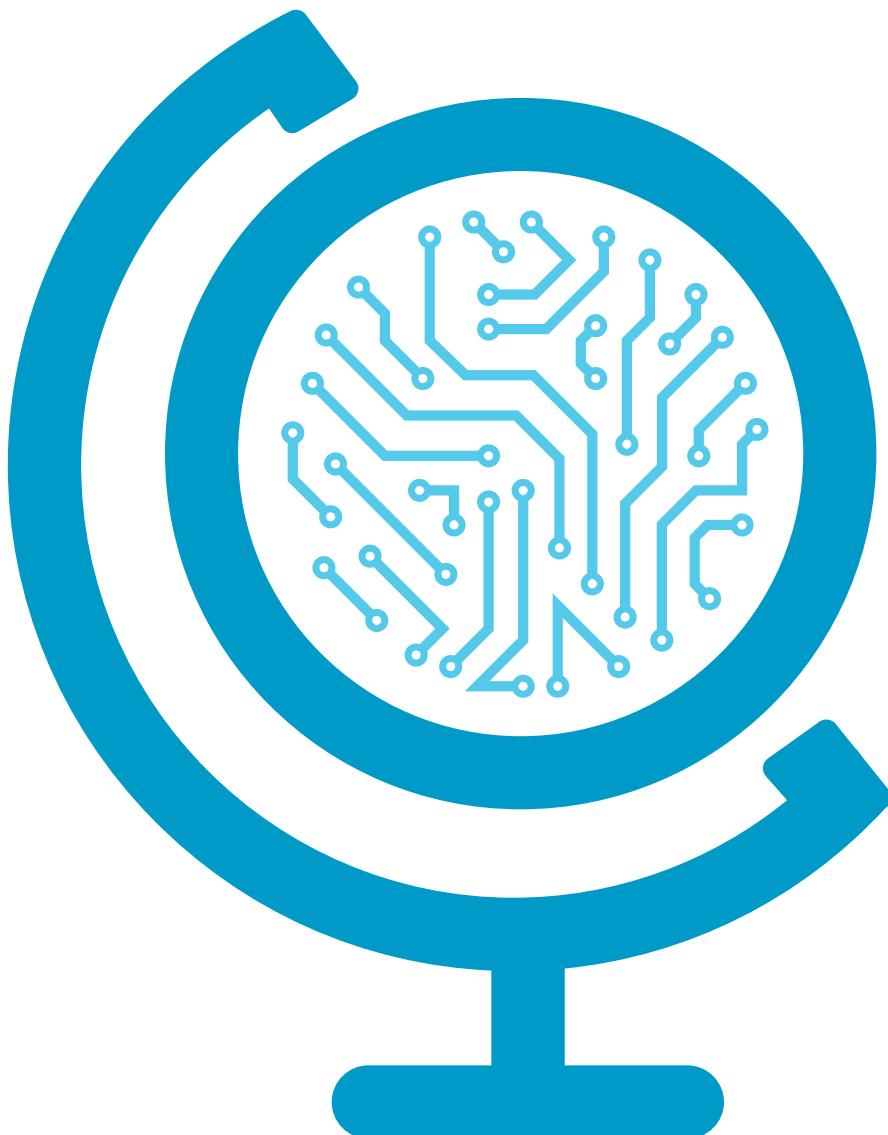

Site Internet: <http://www.inesctec.pt/cegi>

#### **5.6.12 HASLab: Laboratório de Software Confiável**

Dedica-se a produzir sistemas de software confiáveis em contextos em que a correção, capacidade de resposta, robustez e segurança são incontornáveis e tipicamente alvo de certificação. Desenvolve investigação integrada em três linhas e aborda os problemas tomando partido da sinergia entre elas: os métodos formais para o desenvolvimento de software, os sistemas distribuídos confiáveis e a segurança de informação.

Coordenador: Manuel Barbosa

Site Internet: <http://www.inesctec.pt/haslab>

## TELECOMMUNICATIONS AND MULTIMEDIA

### A. DESCRIPTION OF THE RESEARCH CENTRE

The Centre for Telecommunications and Multimedia (CTM) of INESC TEC consists of 130 researchers that pursue the CTM mission which includes the development of advanced systems and technologies for enabling the envisioned lively and sustainable world where networked intelligence enables ubiquitous interaction with sensory-rich content. CTM has a cooperative research environment and senior researchers are given scientific autonomy to pursue their objectives, provided that they are aligned with INESC TEC and CTM visions and missions. CTM is scientifically organized in 4 main Research Areas:

- Optical and Electronic Technologies (OET), addressing research topics related to microwave circuits, antennas, optical communications, microelectronics, and programmable logic. OET aims to develop innovative technologies for optical and wireless communication systems, supported by advanced signal processing techniques, radio devices, design and test of circuits, and reconfigurable digital systems;
- Communications Networks (CN), addressing research topics mostly related to wireless networks. CN aims to extend the Internet to new scenarios including terrestrial, maritime and underground environments with the purpose of enabling the Internet of everything. This includes research on dynamic radio channel assignment and spectrum access combined with cross-layer techniques to enable adaptive radio-aware networks; scalable and traffic-aware routing and topology control techniques, capable of efficiently supporting new types of traffic (from IoT to 4k video); new MAC, routing, and transport protocols tailored to these new scenarios;
- Multimedia Communications Technologies (MCT), addressing topics related to the production, distribution and consumption of multimedia information. MCT aims to radically transform the means by which multimedia content is created, distributed and consumed. The long term vision is towards establishing a vibrant online network of multimedia content where all users can be content creators as well as consumers, or so called "prosumers"; where media is embedded in daily activities, seamlessly enhancing people's way of living; where media technology becomes transparent and a daily commodity, promoting inclusion and providing universal access to content and resources. Scientific goals include cross-media information extraction, multimodal user interaction and engagement, user modelling and personalization, content creation for immersive environments but also new business and policy models. MCT aims to address different application areas that include Cultural & Creative Industries, Cinema, TV, Radio, Music, News, Performing Arts, Fashion, Games, Cultural Heritage, Advertising and Tourism.
- Information Processing and Pattern Recognition (IPPR), addressing topics related to computer vision and intelligent information processing. IPPR pursues a never ending audiovisual information learning system, to empower the next generation of intelligent systems with the capability of reasoning from audiovisual data; on the shorter-term IPPR aims to develop computer based algorithms and systems by proposing machine learning architectures inspired in the sensory cortex that attempts to explain the input data from the world by exploiting prior experience with similar data. The new advances are being validated in key applications on the areas of biometry, medical imaging, and human sensing, contributing to a more enjoyable, secure and healthy environment.

CTM is managed by a Coordination Board consisting of the CTM Coordinator and the 4 Area Leaders, which are helped by an assessor and a secretary. The Coordination Board meets every week and it defines, implements and monitors the details of CTM scientific and innovation strategies. This board is advised by the CTM Council which consists of 25 senior CTM researchers, is led by the CTM Coordinator, and meets with a periodicity of three months; the CTM Council discusses strategic topics for CTM, including the definition of long term vision, mission accomplishment, and promotion of events such as the annual CTM open day. There are typically 4 plenary meetings per year in CTM including one meeting for discussion of last year results and another for presenting the next year workplan.

## B. MAIN ACHIEVEMENTS

### OPTICAL TECHNOLOGIES AND ELECTRONICS

Performance comparison of OFDM and SC-OFDM in Radio-over-fiber systems  
Phase conjugated twin waves in few modes fibers  
Propagation model accounting for the attenuation of radio electromagnetic waves in underwater  
Underwater wireless power transfer  
Antennas for underwater radio communications  
Polarization diplexer for the 17 GHz band  
Frequency converter from the conventional 5.8 GHz band to the 17GHz free band  
Novel analog-to-digital transformation for minimum length synthesis of transmission lines  
IC design and test, in 130nm, of an UWB LNA.  
Design of a novel IR-UWB transmitter in 130nm.  
Machine Leraning algorithms in hardware for IC security  
Circuit design and testing using a-GIZO devices

### COMMUNICATIONS NETWORKS

Call Admission Control algorithm for Wireless Mesh Networks based on Power Interference Modeling  
Network topology control algorithm for flying backhaul networks  
Basic Service Set cascading mechanism for dual-radio 802.11-based Wireless Multi-hop Networks  
End-to-end delay estimation algorithm for supporting delay sensitive traffic in Wireless Sensor Networks  
Centralized medium access control mechanism for Green 802.11-based Wireless Video Sensor Networks using FM-RDS as control channel  
Energy-efficient node selection algorithm for application-driven Wireless Sensor Networks  
Development of new ns-3 modules enabling fast prototyping of proactive routing protocols  
Cross-Layer Admission Control algorithm to support delay sensitive applications in Wireless Sensor Networks  
Design of a reliable link layer protocol for long distance IEEE 802.11n/ac point-to-multipoint communications  
ns-3 simulation framework for the evaluation of a reliable link layer protocol over IEEE 802.11 channels  
ns-3 routing protocol for enabling large scale network simulation  
Two PhD Thesis completed

### MULTIMEDIA COMMUNICATIONS TECHNOLOGIES

MAT project selected by the funding agency as a success case  
Set up of NEM Portugal (New European Media Portugal), a mirror platform of NEM Europe  
A.bel concert at Casa da Musica, presenting technology that transforms the mobile equipment of attendees in instruments that interact with real musicians in the stage (more than 800 attendees)  
A platform for an adaptable and personalized context aware system for online multimedia newspaper access in mobile environments  
Technology transfer through the deployment in a real operation environment of a system for people detection and localization in retail environments  
An integrated environment for sound and music computing and generation  
MCT researcher finalist in the Sonae Media Art Prize  
Impact in the society through more than 60 references of research results in daily news (TV, radio, newspapers)  
Two PhD Thesis completed

### INFORMATION PROCESSING AND PATTERN RECOGNITION

Fingerprint recognition algorithm accredited by NIST  
System for the prediction of the Popularity of Online News (Best paper award em EPIA 2015)  
Algorithm for automatic author identification of documents (first place in an international competition)  
Low cost solutions for the planning of Breast Cancer Treatments  
A Cognitively Motivated Framework for Partial Face Recognition in Unconstrained Scenarios  
Differential Scorecards for Binary and Ordinal data  
Livelong Learning Algorithms from Evolving Video Streams in a Multi-Camera Scenario  
An AdaBoost variant for Ordinal Classification (Best student paper award em ICPRAM 2015)  
Two PhD Thesis completed

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

Source of Funding	Total Income (k€)					Variation 2014 - 2015
	2011	2012	2013	2014	2015	
National Programmes	537	424	409	521	265	-49%
European Union Programmes	257	326	431	337	690	105%
R&D Services and Consulting	70	139	133	271	313	15%
Other R&D sources	75	49

## D. SUMMARY OF PUBLICATIONS

*Summary of recent publications*

Type of Publication	Year					
	2010	2011	2012	2013	2014	2015
Papers in International Journals with scientific referees	19	18	20	33	33	35
International Conference Proceedings with scientific referees	50	45	42	51	70	50
Books - Author				1		
Chapter in books	2	3	3		5	5
Publications (Editor)	2	2				
Other Publications		13				3
Total	73	81	65	85	108	93

## E. SUMMARY OF POST-GRADUATION DISSERTATIONS SUPERVISED BY MEMBERS OF THE CENTRE

*Dissertations concluded in 2015*

Type	Number
Master	74
Doctoral	10
Total	84

## APPLIED PHOTONICS

### A. DESCRIPTION OF THE RESEARCH CENTRE

The CAP activity is organized according to four main research areas: Optical Sensors, Integrated Optics and Microfabrication, Advanced Optical Imaging. In this arrangement optical sensors are organized in Chemical/Biosensors and Physical sensors.

Despite the organization of the activities into four main research areas the idea is not to have hermetic areas of research each one with a certain allocation of researchers but the opposite, i.e., research areas that touch and support each other and researchers whose activities touch the different areas of research.

A good example is the Microfabrication section that is exploring traditional top-down microfabrication techniques and non-traditional based on laser direct writing processes to support the activities of other areas. For example, the design of microfluidics chips is being produced for the implementation of micro and nanostructures; Bragg gratings made by laser direct writing are useful to implement new sensing heads and leading to the development of better and more reliable sensing heads.

Finally the Group has a section of which deals with dissemination activities

The dissemination section deals with all the news related to the Research Group, organization of the weekly scientific meetings for the Group (however, outsiders are welcome!), relation with the Department of Physics and Astronomy (DFA) of the Faculty of Science of University of Porto, scientific dissemination to the general public, etc

Of particular importance is the dissemination within the DFA that hosts the Research Group. In the past the Group implemented a lab which provides advanced experiments that are available for Group researchers but also for advanced lectures for Master and Doctoral classes. These activities lead to better prepared students in these topics and widespread interests on many related subjects.

#### Research Group management

The Centre for Applied Photonics follows, in its internal organization, the general model adopted at INESC TEC. It is governed by a Coordinator and a Coordinating Council composed of 5 to 7 PhDs, having responsibilities over areas of work and research. The project leaders respond to the Coordinating Council in what refers to the execution of projects and meeting financial sustainability goals as well as scientific productivity targets. This Coordinating Council also suggests to the Direction of INESC TEC the form of the participation of CAP in the Communications and Devices cluster coordination.

Each of the research areas has an appointed leader. Ordinary management meetings are held every fortnight to discuss matters related to the research Group daily life, which includes acquisitions, travel, staff and student movements, and project management. The regular attendants to these meetings are the Research Group leader and co-leader together with the leaders of the research areas. Depending on the subjects to be evaluated during the meetings other research group members can be present.

The CAP has a scientific council which is composed of all researchers holding a PhD. The scientific council meets in quarterly meetings to analyse the progress made on the different areas of research and to discuss future work. It is also incumbency of the scientific council to propose new strategic actions.

The main goal of the research group is to innovate with a good equilibrium between purely scientific advances and applied research.

In particular, high level of scientific and technological achievement that should result in higher competitiveness and international recognition is based on specific and adequate infrastructure and resources, a local qualified team and a network of partners that will pursue the supporting funding opportunities.

#### INTEGRATED OPTICS AND MICROFABRICATION

- Implementation of a tri-dimensional laser direct writing station based on a femtosecond fiber laser system (second and third harmonics).
- Monolithic integrated optic devices in pure silica, chalcogenide glasses, Lithium Niobate, for communications, integrated sensors, astronomical interferometry, quantum cryptography, etc

- Fabrication of Bragg and long period gratings and also explore "fiber-integrated optics", i.e, using the fiber cladding as the media to write waveguides and devices. Explore multi-core fibers.
- Hybrid devices that combine optical layers will fluids handling capabilities (opto-fluidics made by femtoetching) for sensing.
- Fabrication of tri-dimensional structures using multi-photon polymerization.

### PHYSICAL SENSORS

The new strategic plan in the nanosensors field is proposed for the next five years, targeting ultra-high sensitivity sensors. In this part, active devices will be designed in order to improve the precision of physical parameters measurement and to apply in new platform for new areas of research.

- Fabrication of nanofiber using a new high temperature micro-furnace for modification of standard optical fiber
- Study and development of nanostructures fabricated through the FIB technique
- Modelling of photonic crystal structures in waveguides incorporated in special microstructured fiber Comsol multiphysic
- Development of nano-active tapers targetting very high resolution and accuracy employing metamaterials and SPR for refractive index measurement
- Expand the application of ionizing radiation dosimeters from the radiotherapy scenario to the monitoring of radiation in industrial facilities and reinforce medical physics capabilities and sensing.

### BIOSENSORS

The main goal of this research plan is to attain a consolidation of the activity in the field of Biosensors using optical technologies and potentiometric measurements:

- Functional fiber tips
- Analytical Imaging. Imaging based sensor platforms for detection with simple camera or microscope exploring functionalized diffractive structures, deferential interferometric interrogation, fluorescence etc.
- Combination of metamaterials with functional layers with focus on structural dependent optical properties for high sensitivity sensing
- Laser assisted functionalization, graphene functionalized structures and nanostructures
- Microfluidics: supporting technology to enable sample handling and conditioning
- Potentiometric sensors for food contaminats determination

These works are targeting single cell diagnostic, optogenetics, food industry, environmental (water quality) and safety - bacterial and viral threats, hazardous chemicals.

### ADVANCED OPTICAL IMAGING

Compressive sensing based imaging based in single-pixel cameras, targeting applications such as Security and defense, Quality control: spectroscopic/hyperspectral imaging, 3D LIDAR imaging, Pharmaceutics, Astronomical imaging;

Reinforce local capabilities in high precision optical imaging, grounded on the knowledge acquired in white light interferometry imaging.

Explore medical and bio-sciences using techniques such as Narrow Band Imaging.

#### DISSEMINATION & INTERNATIONALIZATION

The participation in doctoral programmes, namely MAP-FIS.

Continue to support the 200m<sup>2</sup> cleanroom (ISO6/ISO7) of CEMUP-MNTEC.

However, internationalization is where the Group is making the strongest effort since our international relations have to be enhanced in order to increase the participation in European international consortiums. Participation in short term visits, sponsored by bilateral collaboration projects and others, such as COST projects, will be the key aspects leading to more European projects under the Horizon 2020 programme.

## B. MAIN ACHIEVEMENTS

Improvements, as well as novel configurations were obtained in the following areas:

- Implementation of Rayleigh scattering for vibration sensing
- Integrated refractometers based on single and multimode interference
- Fiber cavity ring down for remote sensing and data processing analysis
- Evaluation of the performance of orthodontic devices using optical fiber sensors
- OTDR applications for cavity ring down using chirped FBGs
- Demonstration of utility of suspended core fibers in the implementation of high sensitivity optical sensors
- Development of new interrogation schemes with long period gratings
- Development of tapers based on CO<sub>2</sub> Laser
- New Cavity Fabry-Perot based on microstructured tube combined with glass spheres.
- FBG in Focused ion beam for high temperature sensor
- Laser direct writing of first order gratings with femtosecond pulses (point by point)
- Novel optical fiber geometry designs for sensing purposes (H-shaped, suspended twin core fiber, multi-cores fiber as examples)
- Fabrication of waveguides in pure silica through femtosecond laser writing
- Fabrication of refractive index sensors in slotted multimode integrated devices for chemical and biochemical sensing
- Optical fiber sensor for hydrogen and metals
- Sensors for determination of Quaternary Ammonium Compounds
- Sensors for determination of crotaline
- Sensor for *B. cereus* and cereulide determination
- Design and synthesis of ionic liquids for future bacterial detection
- Microstructured fiber for vapour and liquid sensing
- Wearable Macrobending Fiber Optic Sensor for Human Joint Angle Determination
- Vibration sensor based on a distributed Bragg reflector fibre laser
- Next generation of Fabry-Perot sensors for high-temperature
- Interrogation sensing scheme based on 'Figure-of-Eight' fiber loop mirror configuration
- Temperature-Independent Torsion Sensor Based on 'Figure-of-Eight' Fiber Loop Mirror
- H<sub>2</sub> sensor Based on a Pd-Coated Tapered-FBG Fabricated by DUV Femtosecond Laser Technique
- Wearable Monitoring Unit for Swimming Performance Analysis
- A Fabry-Perot sensor prototype for low-pressure measurements for medical applications
- Optical Inclinometer Based on a Phase-Shifted Bragg Grating in a Taper Configuration
- Advanced Fiber-Optic Acoustic Sensors
- An all-fiber Fabry-Pérot interferometer for pressure sensing in different gaseous environments and high temperature applications.
- Evanescence wave DNA-aptamer biosensor based on long period gratings for the specific recognition of *E. coli* outer membrane proteins
- Development of a metamaterial for the detection of H<sub>2</sub> Gas
- Development of a software platform for potentiometric data acquisition based on node.js.
- Implementation of subroutines for signal analysis in R.
- Implementation of a compact sampling chamber for portable use of the LPG based biosensor/Validation of the LPG biosensors platform in genomic applications (detection of *Vitis Vinifera* DNA from samples of leaf, grape and wine)
- Design and implementation of a low cost compact optoelectronics platform for interrogation of dCO<sub>2</sub> sensing membranes in field applications of Aquaculture
- Implementation on novel configurations of optical fiber tweezers: polymer based microlenses, vortices structures, Fresnel lens. /Application of new fiber based tweezers in manipulation of cells and cell organelles.
- Development of an electrical current sensor prototype for application in high-power lines-Implementation and validation of several magnetic field sensors, based in fiber lasers and magnetoresistive elements/Implementation of advance interferometric schemes for interrogation of the fiber-laser based sensors.
- Optimization of low cost plasmonic configuration using Modal filtering in multimode plastic optical fibers
- Polymer optical fibers for sensing applications

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

## ENTERPRISE SYSTEMS ENGINEERING

### A. DESCRIPTION OF THE RESEARCH CENTRE

CESE follows, in its internal organization, the general model adopted at INESC TEC. It is governed by two Coordinators and a Coordinating Council including 5 PhDs and 4 senior area leaders, having responsibilities over the areas of research and consultancy.

The project leaders respond to the Coordinating Council in what refers to the execution of projects and meeting financial sustainability goals as well as scientific productivity targets. This Coordinating Council also suggests to the Board of INESC TEC the form of the participation of CESE in the Industry and Innovation cluster coordination.

A dedicated administrative and secretarial support is in place

The Centre is structured in the following four main RESEARCH VECTORS:

1 – Operations Management and Logistics

2 – Collaborative Networks

3 – Decision Support and Business Analytics

4 – Enterprise Information Systems

An additional area for consultancy and technology transfer complements the research activities, mainly with the purpose of supporting the transfer and valorisation of the research results, and of identifying new research opportunities arising from real business environments.

The Centre is committed to conduct high quality research, with a strong application focus, responding to new technical and scientific challenges with clear industrial and social relevance. Research activities are related to Operations Management / Operations Research and Enterprise Information Systems, applied to industrial companies and business networks.

Research objectives in Operations Management and Logistics:

they are related to methods and tools for the optimization of complex and dynamic production systems, including the inter-relations in the life cycle of products, processes, and resources, from design and engineering to recycling/disposal and re-use. The research lines to be explored will address highly adaptive systems allowing dynamic reactions to order-driven production environments. Another research line will address the development of approaches to assess the performance of complex manufacturing environments, with the design of innovative performance estimation models.

Research objectives in the collaborative networks area:

they include governance models for business communities, IT platforms for focused collaboration and knowledge management, simulation models for performance management or network operations design, models for the network process formation and for networking support policies. This research requires a deep empirical knowledge on inter-organizational networking. Following previous work in the area, a research line is being setup for this type of projects. Another research direction will be to explore the technologies of linked data and business analytics in the design and management of collaborative networks. Exploratory work is already being done within this topic.

Research objectives in the Decision Support and Business Analytics area:

the research recently initiated in the Centre, to integrate business intelligence and analytics methods, will be consistently pursued. This research will address several areas in data sciences, including data warehousing, data mining, web mining, text mining, social network analysis, recommender systems, stream mining, in-database mining, model management and data science project management and methodologies. Successful applications of these general approaches are expected in many sectors.

Research objectives in the Enterprise Information Systems area:

- on another direction, the design of advanced decision support approaches, based on the integration of simulation, optimization, and multi-criteria techniques, is not only a way to tackle complex, high impact operations management and logistics problems, but also an excellent opportunity for setting up new innovative research projects. Building up from a rich previous experience, several application domains will be favoured, in supply-chain management and design, in manufacturing systems, in internal logistics, or in operations scheduling and planning. But emergent research areas will also be fostered such as logistics and multi-modal transportation systems, distribution problems, or vehicle routing.

## B. MAIN ACHIEVEMENTS

During the period under analysis (2015) the centre has reinforced its strong links with industry while increasing its scientific output. In terms of publication in peer-reviewed journals, the group has published 14 journal papers in 2015. Another 15 papers were published in indexed proceedings of international conferences with full-paper review.

3 PhD theses were concluded during the period, strongly contributing to the positive scientific performance of the group.

The centre has a strong tradition of participation in large European research projects. These projects have highly contributed to achieving critical mass in the fields of Enterprise Collaborative Networks and Operations Management and to strengthening partnerships with leader research organisations in Europe. During this period the group has initiated 3 new H2020 projects, and 9 remain active, representing a total funding of about 525 K Euro.

The very active participation in the MANUFUTURE European Technology Platform led to the establishment of important partnerships at a European level. These partnerships have played an important role in the preparation and set-up of several European projects that strongly contributed to the results of the group.

At the national level, including research projects funded by FCT, RTD projects in partnership with technology based companies and consultancy firms funded by the P2020 programme, a total of 11 projects were active, representing a total funding of 204 KEuros.

During the period under analysis a total of 13 research, development and consulting projects directly contracted by companies were active, representing a total income of 355 k Euros.

A number of relevant outcomes can be highlighted:

- In the European project STAMINA "Sustainable and Reliable Robotics for Part Handling in Manufacturing Automation" (a collaboration with another INESCTEC centre - CRIS), a software component Logistic Planner was developed allowing the technicians responsible for logistic supermarkets in the automotive industry to model the geometry and location of physical objects in the space (racks, small and large boxes, conveyors and kitting boxes) and subsequently to provide this logistic world model to a fleet of robots that aim to pick automotive parts stored in the logistic supermarket and to build kitting boxes that are then sent to the assembly line. The component defines service oriented interfaces through which interactions with the robot fleet are established in order to plan, assign and monitor the execution of robots' missions.
- In the Portuguese project Adira MicroFábrica - a Portuguese co-funded collaborative R&D project between INESC TEC, INEGI and ADIRA - a mobile factory in set of containers dedicated to the manufacturing of metal sheet based products was designed and built. The main achievement was the development of a bundle of IT applications dedicated to the architecture configuration of each mobile factory instance, upon the characteristics of the products to be manufactured (number and type of machines, number of containers), remote production planning and management of the MICROFACTORY and tele-maintenance of critical equipment.
- Under the PLM4all project, an innovative low cost IT web platform for mechatronic products complete lifecycle management was developed. This was a Portuguese co-funded collaborative R&D project between INESC TEC, INEGI, DREAMO and ADIRA that designed, developed, implemented and tested a tool dedicated to the management of activities throughout the life cycle of complex mechatronic products, (machinery for metal sheet processing, composed with mechanical, electronic and software), covering the phases of ideation, engineering design, manufacturing, use, maintenance, retrofitting and end of life. The main achievement was the development of the systemic concept approach for product design, that rationalizes and normalizes the use of common components between different product families and development of a interoperability stub capable to transfer and record product structures from CAD tools to ERP systems.
- The apps4aME - an European project that aimed to develop engineering applications for advanced manufacturing engineering, has set out to produce a set of engineering applications and an integrating architecture to support the shift from mass production to on-demand production. The project addressed the

problem associated with the difficulty of conventional IT systems adapting to support the application needs of changing situation. While all the required data is within the system, getting it in the form required can be difficult and/or time consuming. In the Apps4aME paradigm, tablet and smartphone devices are ubiquitous in the shop floor environment and aim to speed the design to manufacturing process by providing appropriate information to each domain in the design-to-manufacture process.

- During this period, the centre has collaborated with VW Autoeuropa implementing an innovative approach and tool to calculate key performance indicators in the industrial management department, mainly related to productivity. A number of relevant outcomes can be highlighted: a novel application was designed and developed (hybrid process manager), to support the management of knowledge intensive collaborative environments; the application was implemented at VW Autoeuropa plant with quite good results. The collaboration with VW Autoeuropa has added real value for VW Autoeuropa, reducing substantial effort to calculate KPIs and eliminating errors on the calculation process. This process fostered the good relations between the centre and the company and several peer-reviewed scientific articles were produced and published in international conferences and journals resulting from this collaboration.
- The Newalk project aimed at researching a Flexible and Integrated Logistic system - FlexiFlowSupplyProduction - a novel concept supporting the storage and distribution of materials and components in a shoe manufacturing production system. It enables to manage, store and distribute an high mix of materials, in a pair-to-pair production logic, coping with the growing diversity of shoe models that compose the today's collections.
- In the research line on predictive maintenance, the centre has completed the GNOSIS project, by completing the Big Data infrastructure to predict anomalous events in stone cutting machines. The infrastructure collects the data using Hadoop/Spark technology, manages predictive models to maximize the quality of the predictions generated using SPARK MLLib and R technologies and implemented an interface to provide those predictions using RESTful technology. We have also conducted empirical studies to analyze the data collected. In the MANTIS project, we have continued this line of work by consolidating and extending the data collection and storage infrastructure, improving the model management techniques and applying to a different case study, with machining equipment.
- Forecasting future sales is one of the most important issues that is beyond all strategic and planning decisions in effective operations of retail businesses. For profitable retail businesses, accurate demand forecasting is crucial in organizing and planning production, purchasing, transportation and labor force. In a collaborative work with the Jerónimo Martins Group the forecasting performance of several models was studied using fixed and rolling schemes to generate forecasts. The empirical results show that the global forecast accuracy can be improved with a multi-model system that automatically selects the best prediction model for each SKU.
- Also in the forecasting topic, this time applied to the wireless networks management research area, and in the context of a collaboration with CTM Centre of INESC TEC, a statistic model was specified to establish a relationship between an improved metric to quantize the interference of the network and the throughput. The model can be used to predict the performance of networks similar to IEEE 802.11 based wireless networks and to decide the best configuration a network operator could use for planning his network.
- In January 2015, CESE organized the first edition of the Innovation in Aeronautics Roundtables under the theme “Fostering Global Supply Networks for the Aeronautics Industry in Portugal”, within the scope of the project of the CMU Portugal Program E4value (<http://www.cmuportugal.org/tiercontent.aspx?id=5222>). This Workshop gathered the project’s partners with companies and associations to discuss the challenges of the Portuguese aeronautic sector and establish lines of cooperation. Another research cooperation has been established with the University of Warwick, to study supply network configurations in the Global Aeronautic industry. This cooperation has resulted, so far, in the preparation and submission of one journal paper and one conference paper. Also, during 2015 the collaboration with the Carnegie Mellon University was extended from Pittsburgh to the Silicon Valley Campus. This collaboration has been focused on the study of startups in the wearable technologies industry, in collaboration with C-BER in the project of the CMU Portugal Program VR2Market (<http://www.cmuportugal.org/tiercontent.aspx?id=5238>).

- Several relevant consulting projects with multinational companies have been successfully initiated and concluded this year. It should be emphasized the contract-based services delivered to IKEA Industry Portugal and Lithuania, and to Yazaki Saltano. These projects represent an intensification of the services activity oriented to the design of factories and operations planning, which has been effectively sustained by the research work performed by PhD and Master Students. For a Portuguese SME, a low-cost Automated Guided Vehicle easy to install and use as well as highly configurable and was developed. This AGV concept is prone to be generalised to other SMEs as it can be software integrated with the organisation's management systems. In another contract, a tool to estimate the reliability of eolic turbines using advanced statistical models was developed. The tool promptly identifies the factors affecting the reliability of these equipment's.

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

## POWER AND ENERGY SYSTEMS

### A. DESCRIPTION OF THE RESEARCH CENTRE

The operational and strategic issues regarding the centre are addressed within the Coordination Council, constituted by the group Coordinator, the Coordination Assistant (full contract) and the Area Leaders. This follows the general organization structure within INESC TEC. Support is provided by a secretary and an assistant for monitoring and reporting. A monthly meeting of all the PhD holders (CPES Council) completes the structure.

The Centre for Power and Energy Systems is organized in five application areas, described below:

#### Network Studies and RES & DER integration

Steady-state, dynamic and transient stability (isolated and interconnected power systems). Renewables' integration, Grid codes, Ancillary services from RES. New technologies for flexible transmission and distribution grids, Reduced scale laboratorial testing for power converters (power-hardware-in-the-loop)

#### DMS/EMS and System Operation

Specification, development and integration of advanced computational tools for network management systems, such as: Topology processors, Load allocation, Fuzzy state estimation, Voltage and reactive power control, Fault location with fuzzy inference, Isolation and Restauration (FDIR), Optimal network reconfiguration, Optimal power flow, Contingency analysis, Dispatch Training System, Distribution State Estimator including unbalanced networks

#### System Planning and Reliability

Load research, loss reduction, load pattern analysis, classification and management.

Transmission and distribution system planning. Security of supply, reserves adequacy, transmission and distribution reliability.

#### Electricity Markets and Regulation

Cost allocation for electricity grid users including short and long-term marginal cost methods and estimating marginal compensation. Methodologies for generation expansion in a market environment. New markets and services and new tariff schemes.

#### Energy Analytics and Forecasting

Forecasting of load, RES and market variables, Demand response. Power system and end-users data analytics. HEMS (Home Energy Management Systems) integration. Inclusion of uncertainty in decision-making and optimization problems

## B. MAIN ACHIEVEMENTS

Within the Smart Grid paradigm, the Centre for Power and Energy Systems consolidated the research achievements with different activities, from fundamental research to prototyping and technology transfer. The activity of the Smart Grid and Electric Vehicle Laboratory supported external demonstrations like the one in the Évora demonstration site, in the framework of FP7 project Sustainable.

The main achievements in 2015 were:

- Identification and development of management and control solutions for large scale EV and microgeneration deployment with a strong presence of active demand response
- Development of new advanced management functionalities for distribution grids with large-scale deployment of DER
- Demonstration of advanced control tools in the real smart grids pilot in Évora, namely a voltage control algorithm for LV grids in Graça do Divor, a state estimation algorithm for estimating MV quantities based on smart meter readings at the Montemor Substation and a PV forecasting algorithm for individual LV clients and aggregated also at the MV level for the Évora region.
- Assessment of sympathetic tripping occurrence in distribution grids with different DG technologies connected to it
- Development of protective relay function for allowing DG on providing fault ride-through capability
- Risk analysis performed to stationary Li-ion batteries.
- Participation on the development of an online dashboard tool for cities, in the SusCity project
- Definition of the overall methodology for integration and validation of the iTesla platform involving the integration of several software modules while supporting the TSOs in the validation of the use different use-cases, in the framework of the EU FP7 project iTesla.
- Development of the Fuzzy Power Flow module for the iTesla platform that enables contingency filtering taking into account fuzzy active and reactive power injections.
- Experimental validation of MG service restoration procedures and coordinated control strategies exploiting the role of EV, storage devices, microgeneration units and responsive loads, in order to ensure a seamless transition to islanding operation while increasing its resilience.
- Identification of innovative procedures for power system restoration following a general blackout in electric power systems with by a large share of renewable-based energy sources connected the transmission and distribution levels
- Validation of dynamic simulation models for variable speed pumped storage units, operating either in turbine or pump mode, together with the specification of control functionalities for the provision of specific grid services
- Application for estimating the amounts of mandatory (regulatory) investments in the distribution network, for each voltage level and region. Integration of new features (sensitivity analysis, extension of the outcomes to the municipalities' areas and incorporation of the most recent DSO network expansion guidelines)
- Development and implementation of a decision-aid tool for selecting the best network reinforcement strategies, through the analysis of the long term impact (30 years) of the investment deferral allowed by smart grids.
- Tool for assessing the impact of investments on the quality of service, network losses and operational efficiency of the distribution network. Results were integrated in the Distribution Network Development and Investments Plan (a regulation instrument required by the Portuguese regulatory authority)
- The loss profiles computed by CPES for EDP Distribuição were adopted by the Portuguese regulatory authority to be used in the electricity market in the years of 2015 and 2016.
- Integration and validation in DSO networks of the new algorithm for state estimation on networks with insufficient information, using an autoencoder trained using historical data
- Development of a new upscaling algorithm for wind power forecasting aiming to estimate the total wind power generation in Portugal, using a subset of wind farms. This new algorithm was transferred to a company (Prewind), which is now providing the service to EDP.

- Development and technology transfer of a probabilistic forecasting methodology that produces upscaled forecasts for solar, small-hydro, CHP and wind power, using information from a poor man's ensemble prediction system
- Development of a renewable energy probabilistic forecasting methodology that combines quantile regression in the Reproducing Kernel Hilbert Space (RKHS) with online gradient based learning
- Development of a robust optimal power flow (OPF) algorithm that integrates information about spatial-temporal trajectories (i.e., renewable energy uncertainty)
- Formulation of an optimization problem for variable speed pump storage power (PSP) participating in the frequency restoration reserve market. Detailed modelling of PSP units for optimization problems.
- Development of new market models adapted to generation systems with a large share of hydro systems, as for instance the Brazilian generation system;
- Development of models regarding the implementation of new tariffs, namely Dynamic Tariffs, as a way to induce more efficient uses of the networks.
- Development of new algorithms to deal with the combinatorial nature of transmission expansion planning problems, namely to reduce the search space;

## C. SUMMARY OF PROJECTS

## INFORMATION SYSTEMS AND COMPUTER GRAPHICS

### A. DESCRIPTION OF THE RESEARCH CENTRE

CSIG follows the general model adopted in INESC TEC: it is led by a Coordination board, which is assisted by an advisory RG Council, and is organized in 5 Research Areas.

CSIG is composed by professors, students, and staff. Professors and students come from four different institutions, the Faculty of Engineering of the University of Porto, the University of Trás-os-Montes e Alto Douro, Open University/Universidade Aberta and the Polytechnic of Porto. The RG is organized in five areas: Computer Graphics and Virtual Environments, Special Purpose Computing Systems, Accessibility, Information Management and Systems, and Software Engineering.

CSIG is led by a two-member Coordination, sharing the responsibility of managing the RG. Gabriel David is more in charge of the scientific coordination and António Gaspar is more in charge of the contractual activity and administrative issues. Gabriel David was named for the board of Directors and was replaced in November 2015 by Angelo Martins

Each of the five research areas has a coordinator: Augusto Sousa for the Computer Graphics and Virtual Environments area, João Paiva Cardoso for the Special Purpose Computing Systems area, João Barroso for the Accessibility area, Cristina Ribeiro for the Information Management and Systems area, and Pascoal Faria for the Software Engineering area.

CSIG main research goals are organized as follows:

**INNOVATIVE METHODS IN COMPUTER GRAPHICS AND VIRTUAL ENVIRONMENTS** - Research innovative methods in computer graphics and multimodal, multi-sensorial virtual environments, as well as in natural user interfaces, especially with applications in serious games, including immersive and interactive urban planning, based on virtual environments. Special focus has been given to mobile devices, to modeling and visualization of large scenes for immersive environments, and to image synthesis.

**INFORMATION MANAGEMENT, RETRIEVAL AND PROCESSING** - Investigate frameworks for information management, retrieval and processing in contexts such as web mining, recommender systems, social web, semantic web, information retrieval and text mining. This leads to the development of innovative systems such as federated libraries of semantically socially assisted annotated documents, digital cultural heritage portfolios and e-learning environments and tools.

**DIGITAL PRESERVATION** - Devise models, methods and tools for digital preservation particularly in the area of database preservation and scientific data repository management. Preliminary work has already taken place on the transformation of databases into preservation-friendly representations under the framework established by the OAIS, and on the development of tools for descriptions of scientific datasets.

**SOFTWARE DEVELOPMENT METHODOLOGIES** - Improve and innovate on current software development methodologies with particular emphasis on model-driven development with formal methods, agile and collaborative development methodologies, and software quality assurance based on software testing, verification and certification.

**LANGUAGES FOR RECONFIGURABLE COMPUTING ARCHITECTURES** - Develop compilation techniques to map computations to reconfigurable computing architectures, design of domain-specific languages (DSLs) and development of tools to assist all stages of a design cycle to implement energy efficient, high-performance embedded computing systems.

**LARGE SCALE INFORMATION SYSTEMS** - Develop methodologies and architectures for large-scale information systems, focusing on system integration and interoperability. The activity is also driven by applications with

particular emphasis in the areas of public administration (e-Government), healthcare (e-Health), telecommunications, transport and industry.

## B. MAIN ACHIEVEMENTS

The group maintains its research production, despite the difficult conditions caused by research budget cuts that reduced the number of projects and PhD students.

In 2015 and in comparison with the previous year, the budget increased 49%, slightly surpassing 1,4 M€. All lines of activity increased: services increased 9%, national programmes increased 130% and European projects increased 58%. The Centre maintained its three EU FP7 projects (ICARUS, E-COMPARED and LeanBigData) and gained two more EEA projects (STOPDEPRESSION and SEABIODATA). Most services contracts were also maintained and were reinforced by three new ones (RTE, DIGITAVE and DRIW2020). National projects were joined by CE4Blind.

Prototypes were produced in MASSIVE, ICARUS, E-COMPARED, LeanBigData, SARA, RAIA.TEC, EYEFRY, INMERSE. Pilot installations were deployed in AAL4ALL, OASRN, 3PORT, PGLOBAL, WIDERMOS, DIGITAVE. MASSIVE also has created a Virtual Reality Laboratory which is based in Vila Real at INESC TEC's UTAD pole.

The group continued its involvement in industrial fora, like CEDT – Excellence Center for Transaction Dematerialization (membership of the Board of Directors), HCP - Health Cluster Portugal (representation of INESC TEC), DANOTEC – New Technologies and Defense Association (representation of INESC Porto), AIFF – Forest Industries Association (representation of INESC TEC), ITS Portugal – Intelligent Transportation Systems (membership of the Board of Directors), ELANET – European Local Authorities Association (membership of the Board of Directors) and Hillside Group – Non-Profit Corporation for Software Patterns promotion (vice-Presidency of the Board of Directors).

As a result of the successful MIELE and WiderMoS projects, a spin-off will be created in 2016 by team members to exploit the results of these two TEN-T projects, creating a new web platform for intermodal logistics contracting.

The cooperation with other INESC Centres has increased, both through joint participation in R&D projects (CONTEXTWA, LeanBigData, E-COMPARED, ICARUS, SARA, VCARDID, EYEFRY, CAP@CIDADE, PGLOBAL and RTE) and by submitting new projects, like FOUREYES, SMILES, CORAL and NANOSTIMA

## C. SUMMARY OF PROJECTS

## ROBOTICS AND INTELLIGENT SYSTEMS

### A. DESCRIPTION OF THE RESEARCH CENTRE

The Centre for Robotics and Intelligent Systems will follow, in its internal organization, the general model adopted at INESC TEC. It will be governed by two Coordinators and a Coordinating Council composed of 3 to 5 PhDs, having responsibilities over areas of work and research. The Co-coordinators will be António Paulo Gomes Mendes Moreira (indicated as the PI) and Eduardo Alexandre Pereira da Silva.

The project leaders will respond to the Coordinating Council in what refers to the execution of projects and meeting financial sustainability goals as well as scientific productivity targets.

This Coordinating Council will also suggest to the Direction of INESC TEC the form of the participation of CROB in the Industrial and Innovation cluster and the Networked Intelligent Systems cluster coordination.

This council has meetings every two weeks. It supports the coordinators taking decisions and allows important information to flow.

The group has also a secretariat and a technical support for hardware development.

#### SCIENTIFIC GOALS

The main goal of CROB is the development of innovative robotic solutions and intelligent systems for different application areas where standard platforms are not optimal. Research activities address not only relevant problems in robotics but also application areas where technologies used in robotics play an important role, like control, automation, simulation, modeling, intelligent systems, etc.

The activity is grounded in the following scientific domains:

- Mobile Robotics: Robotic platforms; Control of mobile robots; AGVs.
- Marine Robotics: Design of surface and underwater autonomous vehicles; underwater positioning and navigation, multiple platform systems, supervision of autonomous platforms, robotic based environment monitoring.
- Cooperative robotics: human-machine cooperation and co-working.
- Industrial Mobile Robots: Warehouses and Logistics applications.
- Industrial Manipulators: Rapid teaching and programming interfaces; Hyper-flexible cells.
- Intelligent sensors: Smart sensors; Adaptive sampling strategies in environment monitoring.
- Intelligent control and simulation: control algorithms for complex dynamics systems. Simulation applications.

The CROB is engaged in discovering and developing fundamental scientific principles and practices, such as perception, control and planning, which are applicable to intelligent robot systems and other complex dynamic systems. In addition, the goal of this group is to facilitate the technology transfer of its research to solutions to real world problems for a wide range of application domains, namely, robots that navigate through complex indoor and outdoor spaces and advanced flexible manufacturing support systems.

Finally, there is the awareness that the challenges that CROB faces may only be met in alliance with other Research Groups at INESC TEC. This is why CROB will be involved in both the clusters of Industrial and Innovation and the Networked Intelligent Systems.

#### STRATEGIC GOALS

Among distinct objectives, it is worth mentioning the big challenge of the Deep Sea exploration, motivated by partnerships in Portugal and Europe with raw materials technology industry and by the extremely large EEZ of Portugal (10th in the world). INESC TEC has designed a roadmap for the coming 5 years where CROB plays an important role.

It is due to this strategic goal that important structural investment is foreseen in the period 2014-2020. The acquisition of vital equipment to allow the development of devices and tests compatible with deep sea stressing conditions is a must (e.g., a hyperbaric chamber – which, however, will serve not only CROB but also

other research centres at INESC TEC. For example, the Centre for Applied Photonics CAP will also benefit from this infrastructure and will use it in testing sensing system behavior under deep sea pressure and temperature).

Other strategic goal is to establish INESC TEC as an international reference in the industrial robotics sector making bridges between internationally relevant research centres and local industry. The main research lines are closely related with European research initiatives (the Robotics PPP and the Factories of the Future PPP), and include mobile robotics for logistics, mobile manipulators, human-robot collaboration scenarios and dual-arm robot manipulators. Applications scenarios will go from traditional settings such as assembly welding or painting, to new cases including agriculture harvesting, applications for civil engineering among others.

#### ADVANCED EDUCATION

CROB will reinforce its contribution to the PhD joint Programme in EEC of FEUP together with CMU (Carnegie Mellon University) and MIT (Massachusetts Institute of Technology).

## B. MAIN ACHIEVEMENTS

CARLoS - CooperAtive Robot for Large Spaces manufacturing (2013-2015) - 7th Framework Programme for Research, Funding Scheme : Research for SMEs: a mobile robot as co-worker for fit-out operations inside blocks of ship superstructures.

FOCUS - Advances in FOestry Control and AUtomatic Systems in Europe; 7th Framework Programme for Research; Funding Scheme : SME-targeted collaborative projects: advancing forestry control and automation through the development of an integrated technological solution that combines predictive control with processing and planning processes.

STAMINA - Sustainable and Reliable Robotics for Part Handling in Manufacturing Automation; 7th Framework Programme for Research; Funding Scheme : ICT – Information and communication technologies: holistic approach by partnering with experts in each necessary key fields, thus building on previous R&D to develop a fleet of autonomous and mobile industrial robots with different sensory, planning and physical capabilities for jointly solving three logistic and handling tasks: De-palletizing, Bin-Picking and Kitting.

CLARISSA - Cooperative Dual-Arm Robot for Structural Steel fAbriication; 7th Framework Programme for Research; Funding Scheme SMERobotics: path planning for dual arm robotic welding.

ICARUS - Integrated Components for Assisted Rescue and Unmanned Search operations; FP7: unmanned SAR technologies for detecting, locating and rescuing humans.

SUNNY - Smart UNmanned aerial vehicle sensor Network for detection of border crossing; FP7: new tool for collecting real-time information in operational scenarios, capable of improving the effectiveness of the EU border monitoring.

¡VAMOS! designs and manufacture innovative automated excavation equipment and environmental impact monitoring tools that will be used to perform field tests in four mine sites across Europe with a range of rock hardness and pit morphology.

TURTLE – Autonomous Support System for SubSea Operations: robotic ascend and descent energy efficient technologies to be incorporated in robotic vehicles used for dual-use (civil and military).

SCAN – Aquaculture Calibration System- aims to develop a robotic system for biomass and calibration of Pleuronectiformes species in underwater aquaculture tanks. The system works completely autonomous and its partially submerge, being the first non-intrusive and without fish injuries. It can be adjust dynamically and is built using laser and computer vision techniques to obtain underwater perception capabilities.

RobArq - Robotic Technologies for Non-Standard Design and Construction in Architecture: robotic fabrication of complex geometries and variable customized assemblies employing Portuguese materials (e.g. cork, ceramics, wood);

OCHERA - Optimal Control: Health, Energy and Robotics Applications: analyze, simulate and solve numerically various problems modeling situations in areas as different as health, energy and robotics.

BEST CASE - Better Science Through Cooperative Advanced Synergetic Efforts; Research Line 4 – Cooperation and perception for augmented autonomy: application of new concepts of autonomous systems (robots).

Produtech – Systems and applications for mobile and flexible robotics, organized in three activities.

The Centre established large cooperation with other Centres through projects and proposal submission as well as participation in other cross-centres activities.

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

Source of Funding	Total Income (k€)					Variation 2013 - 2014
	2011	2012	2013	2014	2015

## INNOVATION, TECHNOLOGY AND ENTREPRENEURSHIP

### A. DESCRIPTION OF THE RESEARCH CENTRE

With the joint coordination of João Claro and Alexandra Xavier, in 2015, the Center for Innovation, Technology, and Entrepreneurship – CITE – focused its R&D activities in the following areas:

- Technology Management & Technology Policy
- Technology Entrepreneurship
- Innovation Management & Fuzzy Front End of Innovation

CITE carries out R&D, advanced consulting, and executive education broadly in the areas of Technology Management, Innovation Management, and Technology Entrepreneurship. The center seeks to promote the valorization of the knowledge it creates, by developing conceptual frameworks, methodologies, tools, and executive programs, to be provided to private and public organizations.

The specific objectives for CITE, in 2015-2020, are the following:

Technology Management & Technology Policy :

- look into the ways companies create, appropriate, and deliver value from technology, to improve the understanding of how it can be used to create and sustain competitive advantage; a particular attention is to be dedicated to the topics of technology roadmapping, and implementation of technological innovations;
- study strategies and policies for the use and control of technology for the benefit of communities; priority is to be given to the design of complex networked infrastructures with flexibility, to enhance their performance in relation to uncertain future conditions of operation, and to improving methods for the design of engineering systems aiming at achieving a better integration of engineering, management and social sciences aspects that are traditionally considered individually.

Technology Entrepreneurship:

- improve the knowledge of how new technological businesses form, survive and grow; a focus is to be placed on understanding the factors that support, delay, or block entrepreneurial intentions and activities of university researchers, in the earliest stages of entrepreneurial ventures, and the ways different organisational solutions, such as pre-incubation and proof-of-concept centres address the equity gap problem in early stages of commercialisation.

Innovation Management & Fuzzy Front End of Innovation:

- study the best practices on innovation management, methodologies and tools, that allow companies and organizations to implement and manage their innovation systems in an efficient and responsible way;
- look into how to combine methods and tools based on advanced concepts and trends in various areas, such as IT business systems, business integration, information and communication technologies and business analysis and modellin, to develop multidisciplinary approaches suited to the Fuzzy Front End of Innovation.

## B. MAIN ACHIEVEMENTS

In 2015, in the area of research, CITE completed a very successful project, developed in the scope of the MIT Portugal Program, focused on the problem of forest fires in Portugal, adopting an Engineering Systems perspective. The project created guidelines and tools to support the improvement of the performance of the forest fire management system, which cover, in a cohesive and integrated manner, prevention, suppression, and even forest management. FIRE-ENGINE was considered by the members of its Stakeholder Committee, by the academic community, and by well-informed forest and fire managers, the first research project to develop an integrated image of the Portuguese forest fire management system, in particular from the point of view of technology management and policy.

Still in the area of research, the postdoctoral researcher Sérgio Costa, received the Heizer Award, from the Academy of Management's Entrepreneurship Division, which recognizes the best dissertation worldwide in the area of entrepreneurship. Sérgio Costa's PhD research, conducted in the University of Strathclyde, in the UK, and hosted in part at INESC TEC, studied the evolution of business models in early stage academic spinoffs.

An additional important recognition of the research carried out in CITE is the fact that the paper "Forest fire management to avoid unintended consequences: A case study of Portugal using system Dynamics", co-authored by João Claro and Abílio Pacheco in the scope of the FIRE-ENGINE project, became a required reading in the first class of the "Introduction to System Dynamics" course, in the Sloan School of Management, at MIT, the birthplace of System Dynamics.

In 2015, it was also of high relevance the strengthening of the research collaborations between CITE and other centers of INESC TEC, in particular with the new projects SCREEN-DR (CMU Portugal Program), with C-BER, SafeCloud (H2020), with HASLab, and the horizontal research line in Technology Management and Policy cutting across all INESC TEC's integrated projects proposed and approved in 2015.

Finally, in the area of advanced consulting, in 2015 CITE maintained, under the leadership of Alexandra Xavier, a very expressive and dynamic participation in the national consortium of the Enterprise Europe Network, as well as an active collaboration with ANJE, Universidade do Porto, UPTEC, and UPIN, in the support to entrepreneurship events

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

## BIOMEDICAL ENGINEERING

### A. DESCRIPTION OF THE RESEARCH CENTRE

The Center for Biomedical Engineering Research (CBER) represents the recognition from INESC TEC that Biomedical Engineering has been a growing area within the institution and is now mature enough to generate an autonomous research group. It is organized in three main Labs: BioInstrumentation, Biomedical Imaging and NeuroEngineering. Each lab is organized in Teams with specific research activities.

The Coordination of the RG will follow the general scheme at INESC TEC. It will be governed by a Coordinator and a Coordinating Council composed of 3 to 5 PhDs, having responsibilities over areas of work and research. The project leaders will respond to the Coordinating Council in what refers to the execution of projects and meeting financial sustainability goals as well as scientific productivity targets. This Coordinating Council will also suggest to the Direction of INESC TEC the form of the participation of C-BER in the Nteworked Intelligent Systems cluster coordination.

An administrative and secretarial support will be provided.

The BioInstrumentation Lab is organized in the following Teams:

Wearable Monitoring Systems  
Embedded Visual Sensing

The Biomedical Imaging Lab is organized in the following Teams:

Retina CAD (CAD - Computer Aided Diagnosis)  
Carotid CAD  
Lung CAD

The NeuroEngineering Lab has four Teams:

NeuroImaging – Brain Imaging Technologies  
NeuroMove – Movement Quantification in Neurological Diseases  
NeuroStress – Stress and Fatigue Sensing Technologies  
Brain-Computer Interfaces (BCI) – Neuro-interfaces

Researchers may belong to one or more labs and work with one or more Team. Labs and Teams have a physical meaning, i.e., a Lab exists with Teams inside. A Team may be in a Lab but also depend on cooperation with other labs or even other centers.

There are intra-center activities, namely on rehabilitation and inter-center research within the context of INESC-TEC. All this internal cooperation fosters an international networking, that is planned to expand the existing international contacts and cooperation of the members of the group, namely with the University of Utrecht, NL, , and Carnegie Mellon University, USA, among others.

The three research labs of C-BER plan to expand and enhance their national and international contacts. In particular the computer-aided diagnosis methods and tools developed by the Biomedical Imaging Lab will be validated in a clinical context and further technological transfer of the products is foreseen, both at national and international levels. The NeuroEng Lab plans to foster and enhance research synergy across U.Porto medical and engineering groups involved in neurology related R&D at clinical and basic levels by developing neurotechnology projects. This will also involve other partners namely international R&D groups and industry. The Bioinstrumentation lab also seeks the technological transfer of tools and methods in continuation of previous practice and developed products already available in the market.

## B. MAIN ACHIEVEMENTS

2015 was the second year of activity of C-BER. Naturally, it has an impact on the achievements herein reported, some of them being a result of activities developed in a different environment.

During 2015 the following important achievements can be highlighted in different areas of activity as in publications, in supervision, projects and others.

### PATENTS

J. P. S. Cunha and P. M. Costa, "Wrist Rigidity Assessment Device for Use in Deep Brain Stimulation Surgery," Portugal Patent 20151000030856 (pending), 2015.

### PUBLICATIONS

As reported in section G – List of Publications.

### AWARDS

- Esteemed Paper for 2015 of journal Computers in Biology and Medicine, listed as top 5% in 2015, for the paper "Dashtbozorg, Ana Maria Mendonça, Aurelio Campilho, Optic Disc Segmentation Using the Sliding Band Filter, Computers in Biology and Medicine, vol. 56, pp 1-12, 2015."
- Nominated for the best paper award of poster "Tiago Freitas, Aurélio Campilho, An improved method for juxta-vascular nodule candidate detection, Recpad 2015 - 21st Edition of the Portuguese Conference on Pattern Recognition pp. 36-37, 2015."
- 2nd position in the Grand Challenge in Digital Pathology, Bioimaging 2015 for the system developed by Eduardo Castro, Guilherme Aresta, Teresa Araújo, José Rouco, Aurélio Campilho, Breast Cancer Histology Images Classification using Convolutional Neural Networks, Bioimaging 2015.

### PROJECTS

- SCREEN-DR: Image Analysis and Machine Learning Platform for Innovation in Diabetic Retinopathy Screening, CMUP-ERI/TIC/0028/2014, April 2016 – March 2020, (552.044 Euros). (Aurélio Campilho Principal Investigator).
- LNDetector - Automatic Detection, Segmentation and Classification of Pulmonary Nodules System in Computed Tomography Images, PTDC/EEI-SII/6599/2014, Jan 2016 – Dec 2018 (198.189 Euros). (Aurélio Campilho Principal Investigator).
- Analisis Automatico de Imagenes De Retina y Carotida: Correlacion Entre Microcirculacion Retiniana y Macrocirculacion Cerebro-Vascular, TIN2011-25476, 01/01/2012-31/12/2014 (76 KEuros), with University of Coruña, Spain
- NanOSTIMA - Macro-to-Nano Human Sensing: Towards Integrated Multimodal Health Monitoring and Analytic, NORTE-01-0145-FEDER-000016 – Coordinator of Research Line 1 – Macro-to-Nano Human Sensing Technologies (2015-2018) 1,260,765.70 € (Aurélio Campilho Coordinator of Research Line 5.).

## POST-DOCTORAL

### Phd Supervision

- Title: "Automatic characterization of atherosclerotic plaque in ultrasound images", Bolsa de pós-doutoramento da FCT, contrato SFRH/BPD/79154/2011. Researcher: José Rouco Maseda, Starting date: 1-Jan-2012; End date: 31-Dec-2017
- Title: "Measurement of vascular biomarkers in retinal images", Bolsa de pós-doutoramento do INESC TEC. Researcher: Beatriz Remeseiro López (Spain), Position: Post-doctoral grant, Dates: May 1, 2015; Dec 31,2015

### Ph.D. Theses – Concluded

Antonio José Salazar Escobar, Mixed-signal Test and Measurement Framework for Wearable Monitoring System, Ph.D. in Electrical and Computer Engineering, 2015. Supervisor: Miguel Velhote Correia.

Maria João Medeiros de Vasconcelos, Computational algorithms for image analysis: Applications on human vocal tract and silhouette, Programa Doutoral em Engenharia Informática, 2015. Co-supervisor: Miguel Velhote Correia.

Behdad Dashtbozorg, Advanced Image Analysis for the Assessment of Retinal Vascular Changes, Ph.D. in Electrical and Computer Engineering, 2015. Supervisor: Ana Maria Mendonça, Co-upervisor: Aurélio Campilho.

### Ph.D. Theses – under development

- Daniela Marisa da Silva Campos, "Lung nodule characterization and follow-up assessment", FEUP. Supervisors: Aurélio Campilho , Ana Maria Mendonça.
- José Ricardo Ferreira de Castro Ramos, "Content based image retrieval as a computer aided diagnosis tool for radiologists", FEUP. Supervisors: Aurélio Campilho.
- Maria do Carmo Vilas-Boas, "Motor impairment assessment in TTR Familial Amyloid Polyneuropathy", FEUP. Supervisor: João Paulo Cunha
- Dustin Axman, "Stress and Fatigue detection in Hazardous Professionals", CMU/FEUP (CMU-Portugal), Supervisors: João Paulo Cunha (FEUP) / Fernando de La Torre (CMU)

## OTHER

Aurélio Campilho is Associate Editor of the Machine Vision and Applications Elsevier Journal and is a member of Editorial Advisory Board of JTACS - Journal of Theoretical and Applied Computer Science, Polish Academy of Science. <http://www.jtacs.org/sciboard>.

Aurélio Campilho was chair and editor of the book of abstracts of the DCE 2015 - Doctoral Congress in Engineering, Doctoral Symposium in Electrical and Computer Engineering, FEUP, 2015.

João Paulo Cunha was member of the external evaluation committee for the Biomedical Engineering area of the National Agency for Higher Education Accreditation (A3ES) that evaluated most of the degrees in the area in Portugal.

## ARTIFICIAL INTELLIGENCE AND DECISION SUPPORT

### A. DESCRIPTION OF THE RESEARCH CENTRE

LIAAD's aggregating focus is decision support, data science ad decision modeling. Current scientific lines are organized in three main divisions:

- Data Mining (including mostly machine learning and artificial intelligence approaches);
- Data Analysis and Statistical Methods;
- Modeling and Optimization (including operations research, mathematical modeling and artificial intelligence approaches).

Within INESC TEC, LIAAD has a horizontal range of skills that are useful for the development of application and research projects in different areas of application. Starting collaborations are often done through the coordinator, who matches the right skills within LIAAD with the required needs for each project. LIAAD increasingly benefits from the support of the industrial liaison service SAPE.

LIAAD has one secretary, dedicated 50% and one scientific manager(50%). For technical support, LIAAD uses a part-time collaborator who articulates with the software support service SAS.

LIAAD's research lines can be summarized as "Intelligent and Adaptive Systems and Mathematical Modeling in Decision Support".

LIAAD's aims are to produce high quality cutting-edge research, to be in the international forefront of our research areas and promote transfer of knowledge and technology. LIAAD is in the very strategic area of Data Science. The huge amounts of collected data (Big Data) and the ubiquity of devices with sensors and/or processing power offer opportunities and challenges to scientists and engineers. On the other hand, the demand for complex models for objective decision support is spreading in business, health, science, e-government and e-learning, reinforcing our investment in different approaches to modeling. Our overall strategy is to take advantage of the data flood and data diversification and invest in research lines that will help shorten the gap between collected data and useful data, as well as offering diverse modeling solutions.

The lines of work related to Data Science that we will continue addressing in the near future are:

- Data streams: allow the treatment of continuous and voluminous streams of data generated by sensors or other sources;
- Temporal and Spatial data analysis: the ubiquitous and permanent data collection implies awareness of time and space; new algorithms are needed for prediction and monitoring of unusual events within spatio-temporal context converting predictions into useful decisions in subsequent decision making steps;
- Web, Text and Media data analysis: the growth of the size and importance of the web and social networks, and the increasing variety of contents require increasing data analysis capabilities of huge and complex data that enable powerful applications (including: sentiment analysis, information retrieval, recommender systems, social network analysis);
- Complex data analysis: data comes in varied and new formats, containing more and more information, from domains ranging from genetics to urban mobility (including ILP, symbolic data analysis, network data, data fusion, variable selection and grouping, active learning);
- Meta learning: the growing dynamics of data requires systems that are self-aware and capable of adapting to new problems with little human intervention.

The lines in Modeling are:

- Simulation and optimization: focusing on solutions for decision problems in management science and other application areas; Exploiting meta-heuristics and optimization techniques based on genetic algorithms, ant colony systems, among others; methods using AI-based approaches, such as multi-agent framework, that enable the simulation of the society or the economy and the interplay between their agents;
- Mathematical modeling focusing on dynamical systems and game theory: applicable to mathematical physics, mathematical biology, time series analysis, mathematical economy and finances and models of industrial organization.

## B. MAIN ACHIEVEMENTS

In 2015 the group had a high number of publications (45) in international journals. We also counted 27 articles in highly ranked conferences (CORE>=B or indexed in ISI or SCOPUS), including IJCNN, IDA and SAC. Overall the group published more than 100 articles in journals, conferences and books. Researchers from the group have participated in the organization of many international conferences, as organization committee members, track chairs, area chairs and program committee members. 9 new books and 5 special issues of journals were released with collections of articles. 7 PhD theses and 44 MSc dissertations with supervision or co-supervision of LIAAD members were concluded and defended last year. Many of our researchers participate as members of editorial boards of scientific journals and scientific committees of international conferences.

Two LIAAD members were the Conference chairs of ECML/PKDD 2015, the main European conference on Machine Learning and Data Mining with more than 600 participants. Other LIAAD members participated in different roles of the organization. Other events organized: Artificial Economics 2015, FEP, Porto , 3 to 4 September, 2015, <http://ae2015.inescporto.pt/> and various workshops and special tracks in international conferences.

LIAAD cooperated in projects with CEGI, CESE, CPES, ROBIS and CRACS.

Some books and articles authored by LIAAD researchers have a very high number of citations: the book "Knowledge discovery from data streams" by João Gama (2010) reached 442 citations by the end of 2015 (source Google Scholar). "Data Mining with R, learning with case studies" by Luís Torgo (2010) has reached 184 citations, 49 of which in 2015 only (source Google Scholar). One single article by José Fernando Gonçalves reached 517 citations, 52 of which in 2015 (source Google Scholar).

Papers were published in high impact journals such as Human Mutation (IF: 5.144), Information Sciences (3.242), Obesity Surgery (3.747).

Alberto Pinto is editor-in-chief of the Journal of Dynamics and Games published by the American Institute of Mathematical Sciences We had special issues in the Machine Learning Journal, Data Mining and Knowledge Discovery and Information Processing and management, among others.

Software was made available to the community: AMRULES is available in MOA and SAMOA; the R package "performanceEstimation" for performance estimation and comparison of predictive models.

We had a knowledge transfer contract with an important Portuguese book publishing company and another on a Business Intelligence solution for the University of Porto. We participated in one H2020 project.

Elements of LIAAD continue to have prominent roles in scientific societies: Paula Brito as president of IASC, International Association for Statistical Computing; Alberto Pinto is President of the International Center of Mathematics CIM, Portugal

The Center established large cooperation with other Centers through projects and proposal submission as well as participation in other cross-center activities. This is reported in the Research Lines report sections.

As main results of the cooperation of this research group with other competences we highlight:

CRACS - joint project for knowledge transfer;

CESE – an upgrade of a business intelligence solution has been deployed at Universidade do Porto; joint papers published; joint supervision of students;

CEGI - joint papers published.

CPES - co-supervision of an MSc dissertation.

## C. SUMMARY OF PROJECTS

## CENTRE FOR RESEARCH IN ADVANCED COMPUTING SYSTEMS

### A. DESCRIPTION OF THE RESEARCH CENTRE

CRACS aims at developing fundamental and applied original research with international impact, promote national and international cooperation, foster the training of highly qualified researchers, and actively establish partnerships with industry to promote and disseminate research results.

CRACS is organized in three main research areas, following the expertise of the team, namely languages and distributed computing, security and privacy, and knowledge in a world of data.

CRACS was originally created in 2007 as an autonomous FCT research unit, evaluated as Very Good in the last evaluation exercise, being one of the very few receiving this high mark. It started with 8 senior researchers and around 20 other junior researchers. Today, CRACS is composed by 15 integrated members and around 40 associate members of which 14 are PhD students, 4 Post-Docs, 20 junior researchers working in their masters and/or in funded research projects, and 2 senior collaborators. One half-time secretary provides administrative support to the whole group.

CRACS aims at providing a simple yet effective organizational structure. The management structure follows the general model implemented throughout INESC TEC. Management is ensured by a Coordinator, a Coordination Committee and a Scientific Committee. The Scientific Committee is composed by all integrated members of CRACS and among its functions is to elect the Coordinator and discuss and approve medium/long term strategic decisions. The Coordination Committee is composed by the Coordinator, which represents CRACS, and one or two other nominated members. This Committee will also advise the INESC TEC Board in the integration of CRACS in the Computer Science cluster coordination.

CRACS has committed significant project funding to ensure sufficient computational resources to support research in parallel computing and scalable algorithms. This was a strategic decision that should be kept as such resources require renovation from time to time.

CRACS shares the advisory scientific board of INESC-TEC, which is composed by highly experienced international CS researchers.

Administrative and secretarial support dedicated to CRACS will be in place.

We are motivated by the challenges on the interface between programming languages, logic, probabilities, data structures, and learning. Scalability is a common motif in our work: scalable representations, scalable retrieval of data, scalable discovery algorithms, and automated decision making in the presence of large data. Research goals are anchored in three main research areas, that we detail next:

#### LANGUAGES AND DISTRIBUTED COMPUTING

Our goal has always been to develop high-level programming languages. In future work, we plan to focus on languages that can take advantage of large-scale execution infrastructures. Scalability involves not only the usual aspects of performance, e.g., speedups for parallel applications, but also, deployment and management issues, e.g., a correct by design programming language for WSN allows the programming, deployment and management of a large scale sensing infra-structure by statically guaranteeing that applications will not produce run-time errors. Coupled with an appropriate middleware layer such languages could be used to seamlessly configure, deploy and manage large scale WSN. We are also interested in the development of large-scale computing infra-structures, e.g., clouds, based on large collections of ubiquitous devices connected through ad-hoc networks. Such infrastructures will, in our view, revolutionize the way people interact with technology and provide the grounds for the development of important services, e.g., setting up basic communication networks for first response in the event of a catastrophe.

#### SECURITY AND PRIVACY

Following the line of work we have been developing with the Portuguese Data Protection Commission and keeping in mind the problems regarding security and privacy raised by the other lines of research of the group we plan to focus and strength our work on algorithms and methodologies to improve the usability of privacy and security in software and systems, namely on user-controlled identity management systems that respect user privacy and protect personally identifiable information. The main focus of this line of research is to promote and raise the Privacy by Design paradigm in opposition to the traditional privacy by redesign approach. We will also continue our work on secure identity cards and authentication mechanisms with a view to ensure access control to physical locations or networks, as well as to enable identity verification in online transactions or governmental services communications to guarantee its data integrity and non-repudiation properties; specialized algorithms and tools for sharing sensitive data while preserving privacy.

#### KNOWLEDGE IN A WORLD OF DATA

The Internet is our first domain of interest, a source and consumer of all kinds of data. A case in point and a challenge to our techniques are Massive Online Open Programming Courses (MOOCs); world scale programming contests, such as IEEExtreme; and Federated Libraries. We shall apply our experience with the successful Mooshak system in tools for massive program submissions and online evaluations. In related work we will research socially assisted annotated documents, and digital repositories of learning objects, a rich source of structured data for learning.

A different, but at least as valuable source of challenging data is medical record data, such as Electronic Health records. This is noisy, incomplete data, and as larger databases are being established, it raises a number of scalability issues. We strongly believe that the integration of EHRs, and high-throughput genomic data provides a great opportunity and challenge for scalable multi-relational learning.

Applications will tie our work together with areas such as author identification, semantic relatedness, sentiment discovery, interesting node discovery, sensor data streams, medical data, and genomics data.

## B. MAIN ACHIEVEMENTS

Over the years, CRACS has been quite successful in consolidating the research team, attracting young talented researchers, sustaining the publication ratio of the team at an excellent level, increasing international cooperation, and participating in program committees of reputable international conferences. Some highlights of 2015 follow:

### RESULTS

CRACS was successful with 5 new projects: 1 FCT project, 2 UTAAustin-Portugal projects, and 4 N2020 projects, totaling over 1,100,000 euros of competitive funding.

CRACS published over 56 publications: 9 in journal, 35 in international conferences (23 of which in proceedings by Springer, ACM, or IEEE), 1 technical book, 7 book proceedings, and 2 book chapters.

CRACS members participated in the organization and/or PCs of a good number of relevant conferences, such as ECML PKDD, ICLP, ILP, AAAI, FAB, FSCD, PADL, MOD, EPIA, StarAI, IDEAS, CSE, FLOPS.

Regarding advanced training: 13 MSc and 2 PhD theses were concluded. There are 8 phd on going. 28 junior researchers were hired with project funding.

### ACTIVITIES

Yap: a highly reliable and performing Prolog system developed by CRACS group since the 80s. It is a vehicle for research as well as for teaching and industry. Research achievements around Yap and logic based systems have been:

- started the development of a new version of Yap that aims to integrate Python, Java and R environments;
- a new approach for multithreaded tabling in Prolog based on a lock-free hash trie design for concurrent accesses to the table space data structures;
- a first implementation of an or-parallel Prolog system specially designed to explore the combination of shared and distributed memory architectures in clusters of multicore;
- a new concurrent forward-chaining linear logic programming language, called Linear Meld (LM), which supports coordination and structured manipulation of mutable state in cooperation with CMU;
- a new Stochastic Inductive Logic Learner (SkILL), which takes probabilistic annotated data and produces First Order Logic theories. SkILL's capabilities were demonstrated using a real world medical dataset in the breast cancer domain.

Logtalk: 3rd generation of this OO LP language became available in early 2015. It focused on refined semantics, performance, and reliability, with an extensive reflection API. Later in 2015 a US company, Kyndi Inc., sponsored the move to a more commercial-friendly license, Apache 2.0, and have been sponsoring regular Logtalk updates with an emphasis on developer tools.

Hyrax: a first version of a user generator replay crowdsourcing app was produced; the middleware of Hyrax to seamlessly support the multiple layers, network overlays, services and applications has been continued; work on the app for distributed photo search has also started.

A general typed language that deals with the notion of event in the context of access control systems with obligations and a metamodel for access control with obligations using a rewrite based semantics; and a graphical framework for the specification and verification of policies, using the CBAC metamodel (category-based access control)

Graph Mining: focused on pattern discovery, and we developed new efficient algorithms for approximate subgraph census, new data structures for large graphs, a new methodology for discovering roles in

informations cascades and a new algorithm scalable algorithm for boolean matrix decomposition. From an application point of view, we conducted detailed analysis of gene co-expression networks and tennis networks.

REMINDS: development of a system to automatically filter and identify potentially relevant information, from a journalistic perspective, in social media.

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

Source of Funding	Total Income (k€)					Variation 2014 - 2015

## INDUSTRIAL ENGINEERING AND MANAGEMENT

### A. DESCRIPTION OF THE RESEARCH CENTRE

CEGI follows a matrix organizational structure based on three knowledge fields (Service Design and Engineering, Decision Support and Intelligent Systems, and Performance Management and Business Intelligence) and on four application areas (Manufacturing, Retail, Health and Mobility). Each of the knowledge fields is headed by two senior researchers that are responsible to lead the research in the respective topic and look for funding opportunities. Each of the application areas is also promoted by two senior researchers that facilitate the flow of information, skills and opportunities around the respective area.

This management structure is led by two coordinators and an advisory board.

This matrix organization aims to attain the following goals on the three knowledge fields:

#### SERVICE DESIGN AND ENGINEERING

In the service design and engineering knowledge field there are three intertwined goals to be addressed:

- Design and engineering of Complex Service Systems and Value Networks, creating new services in the context of distributed and interconnected value co-creating actors, such as health care.
- Designing for the Customer Experience, involving the pursuit for a holistic understanding of the customer experience and a human-centered design approach that continuously feeds the service design process with customer experience input.
- Designing and engineering of technology enabled services, integrating multiple disciplines such as ICT (Information and Communication Technologies), Human Computer Interaction, Service Design and Service Management, to support the transition from technology development to creation of innovative services that create value for customers and organizations, particularly in the areas of mobile services, smart services, and social networks.

#### DECISION SUPPORT AND INTELLIGENT SYSTEMS

In this knowledge field, researchers design, develop and implement quantitative models, methods and tools to solve operations management problems in the four application areas (health, retail, mobility and manufacturing). These problems involve different decision making procedures, planning horizons, entities and objectives, and are usually classified according to their hierarchical level:

Strategic (e.g., Capacity Planning);  
Tactical (e.g., Resource Allocation);  
Operational (e.g., Scheduling and Control).

The solution approaches used to tackle this problems trade-off effectiveness and efficiency, and include:

- Mathematical modeling and programming.
- Robust and efficient optimization algorithms to produce resilient solutions, adaptable to frequent changes in the operating conditions.
- Matheuristics that exploit the hybridization of mathematical programming techniques in (meta)heuristic frameworks.
- Simulation-based Optimization that integrate optimization techniques into simulation analysis.

The overall goal is to address the several challenges related to model and solve these problems. This effort requires advances in the state-of-the-art of mathematical programming and solution approaches.

## PERFORMANCE MANAGEMENT AND BUSINESS INTELLIGENCE

Regarding the performance assessment stream, there are several goals to be addressed:

- Performance assessments exploring Data Envelopment Analysis, econometric and statistical techniques.
- Developing enhanced efficiency and productivity measurement models that can identify the drivers of good performance in companies.
- Enhancing organizational performance in different sectors and promoting robust benchmarking.
- Exploring new methodologies to assess and improve quality of life and livability of urban areas, as they are essential to the sustainable development of countries given their role in the attractiveness of human capital.

In the Business Intelligence stream, which includes Data Mining, Data Analysis and Statistical methods (applied to companies' management), the goal is to address the needs of business by extracting knowledge from data that could be leveraged to increase, for example, revenues. To that end, new analytical techniques are required. Actually, the challenges placed by large data sets lead to a redefinition of the processes of data analysis to find patterns and relationships between data elements in large and noisy data sets.

These knowledge fields are not closed on their own. Therefore, CEGI aims to pursue research areas that are just at the interface of these fields. Namely, CEGI wants to investigate the methodologies that should be used to hybridize optimization and data-mining techniques. Moreover, the relevance of using service design and engineering approaches to better frame decision problems is another goal to be attained.

Currently, CEGI has 27 integrated PhD members. This number is expected to rise in the years to come as several structural projects were recently approved.

## B. MAIN ACHIEVEMENTS

During the year of 2015, several researchers of CEGI have been distinguished with nominations and prizes, as follows:

1. J. A.Cabral. Award “Personalidade Qualidade 2015”, by Associação Portuguesa de Qualidade.
2. L.Guimarães. Award “BEST Operations Research Thesis”, by Associação Portuguesa de Investigação Operacional (APDIO).
3. L.Guimarães. “Isabel Themido Prize – best paper”, by APDIO.
4. T.Bianchi-Aguiar, E. Silva, L. Guimarães, J. F. Oliveira, M. A. Carraville. Finalists of the “Wagner Prize award”, for Excellence in Operations Research Practice, by The Institute for Operations Research and the Management Sciences (INFORMS).
5. G.Beirão, L.Patricio. Highly-Commended Award paper at QUIS14 - 14th International Research Symposium on Service Excellence in Management.
6. A.Camanho. Best Reviewer of the Journal OMEGA (International Journal of Management Science).

Furthermore, one researcher of CEGI became Editor of one of the most prestigious journals in OR&MS: The European Journal of Operational Research (EJOR).

CEGI members did also act as members of the Organizing and Scientific Committees of international journals and coordinated and participated in XXX research projects funded by external entities (national and European).

As for post-graduated studies supervised by members of the Center, 56 Masters and 9 Doctoral dissertations were concluded in 2015.

It is also noteworthy that three members of CEGI co-founded a spin-off of INESC TEC dedicated to Business Analytics.

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

Source of Funding	Total Income (k€)					Variation 2014 - 2015
	2011	2012	2013	2014	2015	
National Programmes				135	43	-68%
European Union Programmes					19	
R&D Services and Consulting		54	54	255	366	44%

## HIGH-ASSURANCE SOFTWARE LABORATORY

### A. DESCRIPTION OF THE RESEARCH CENTRE

In its internal organization, the HASLab follows the general model adopted at INESC TEC. It is governed by a Coordinator and a Coordinating Council composed of 3 PhDs, having responsibilities over areas of work and research. At present, the group is coordinated by Rui Carlos Oliveira, and the Coordinating Council includes also Manuel Bernardo Barbosa and Manuel Alcino Cunha.

Project leaders respond to the Coordinating Council in what concerns the execution of projects and meeting financial sustainability goals as well as scientific productivity targets. This Coordinating Council is also responsible for articulating participation of HASLab in the Computer Science cluster, in coordination with the Direction of INESC TEC.

Given the geographic reality of the location of the main HASLab activity (in Braga), the Coordinator of HASLab and its Coordinating Council also hold the responsibility for the management of the pole of INESC TEC at the University of Minho and establishing the necessary relations with its Schools. A specific administrative, secretarial and technical support service system has been put in place, within a framework of agreement with the academic authorities of the University of Minho.

The overarching objectives of HASLab are (1) to consolidate our position as an internationally recognized research lab on high assurance software and (2) to strengthen regional impacts of the focus on high assurance in software design, development, and deployment. They translate to the following concrete goals:

- To extend the activity of HASLab to the later stages of the knowledge-to-value production chain. HASLab currently focuses on the early stages of the knowledge-to-value production chain, mainly, on knowledge production and applied research. The integration in INESC TEC should allow HASLab to strengthen the Development and the Technology Transfer activities and should be measured by an increased participation in collaborative projects with the industry, mainly in the context of European Framework Programmes, as well as by direct development and technology transfer contracts.
- To increase the effectiveness of collaboration within HASLab. Approaching research issues with a comprehensive perspective on high assurance, including software engineering, distributed systems, and information security aspects, enables novel solutions that advantageously compete with proposals that consider each aspect alone. This should be measured by the ability of HASLab to jointly address emerging challenges, such as data management in the cloud, and the new interaction paradigms that arise in the Internet of Things.
- To increase the collaboration with other research groups at INESC TEC, University of Minho and University of Porto. Although HASLab strives for research excellence by specializing on a narrow set of related topics, obtaining a wider societal impact for research depends also on how contributions are integrated to solve problems widely perceived as relevant. HASLab aims to leverage the dual affiliation of most members to INESC TEC and Universities—the majority at E. Eng. / U. Minho, but also present at the Faculty of Engineering and the Faculty of Science at U. Porto—to collaborate with other research groups and overcome this challenge. This should be measured by the participation of HASLab in a large scale effort to address a multi-disciplinary grand challenges such as the smartgrid and health information systems.
- To emphasize high assurance software foundations and technologies in graduate programs. HASLab researchers are involved in Masters and Doctorate level programs at the U. Minho and the U. Porto and the proposed curricula must reflect the awareness of high assurance requirements, theory, and technology. Besides directly participating in research activities, graduates are also ambassadors to the industry, strengthening the impact of HASLab. This should be measured mainly by the graduate students that focus on high assurance software topics in their theses.

## B. MAIN ACHIEVEMENTS

The HASLab steadily produces fundamental and applied research that satisfies the quality standards of the top rated journal and conferences (rated A\*, the best of the best in the popular computer science CORE venue ranking) in each of its areas of research. In 2015 we have published 32 journal articles and 14 full papers in international conferences rated at least B in the CORE ranking.

Major outcomes of our research in 2015 were:

- In the area of distributed systems, HASLab focused its attention on the research and development of large scale -dependable systems and big data techniques. We highlight three contributions. A journal paper published in JPDC 2015 presented fault-tolerant techniques for large scale aggregation in dynamic networks. A journal survey paper on distributed aggregation protocols was published in IEEE Communications Surveys & Tutorials. A conference paper, published at Middleware 2015, advanced the state of the art in scalable total order algorithms, a key component for building reliable distributed systems.
- The development of formal modeling and verification techniques and tools have been the main focus of the HASLab's activities in software engineering. The full software development cycle was addressed, ranging from the specification and design to the implementation, with contributions published at several key venues. One highlight was the usage of IVY, a tool for specification and verification of interactive systems in the certification process of Nidus, the Newcastle infant dialysis and ultrafiltration system developed at the Royal Victoria Infirmary (RVI) in the UK. The IVY tool was used to analyze the control logic of Nidus, and helped identify potentially problematic behaviors.
- Two contributions to high-profile cryptographic library implementations resulted from novel scientific contributions in the area of information security. In a paper published at IEEE Security & Privacy 2015 a new protocol for privacy-preserving computation in the Cloud was proposed; this protocol was later included in the libsnark open source library that is freely available from GitHub. The discovery of an implementation bug and an associated vulnerability in Amazon's (AWS Labs) implementation of TLS, the S2N library, resulted in a contribution to this implementation that eliminated both the bug and vulnerability, as well as a software development methodology that permits reducing the probability of such errors occurring again.
- The SafeCloud EU H2020 project started in 2015. SafeCloud is a multidisciplinary project coordinated by the HASLab that addresses the integrity, security and privacy issues of moving sensitive applications to the Cloud. The HASLab was also present in ICT 2015 to disseminate the research done on FP7 EU project CoherentPaaS.

The HASLab established significant cooperation with other Centres in INESC TEC through projects and proposal submission as well as participation in other cross-Centre activities.

### PROJECTS

4 EC-funded projects in 2015 ( 1 kicked-off in September)

5 CCDR-N (QREN) funded projects completed in 2015

5 FCT-funded projects completed in 2015

2 industry-funded projects completed in 2015

1 industry-funded project ongoing in 2015

### PUBLICATIONS

32 papers in international peer-reviewed journals

40 papers in international conferences with peer reviewing (CORE: 3 A\*, 2 A, 9 B)

5 PhD thesis

30 Msc thesis

## AWARDS

One of the highlights of 2015 was the award of an ERC grant to Alexandra Silva on the topic of the design and programming of complex network systems.

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

Source of Funding	Total Income (k€)					Variation 2014 - 2015
	2011	2012	2013	2014	2015

## RESEARCH CENTRE IN REAL-TIME COMPUTING SYSTEMS

Since 2015, CISTER has become an independent R&D Unit, although still linked to INESC TEC in the context of the Associated Laboratory. For this reason, activity indicators are reported in this part of the annual report, but are not integrated with other Centres that constitute INESC TEC R&D Unit".

## C. SUMMARY OF PROJECTS

*Evolution of annual income from projects*

Source of Funding	Total Income (k€)					Variation 2014 - 2015
	2011	2012	2013	2014	2015	
National Programmes	245	541	339	883	726	-157
European Union Programmes	64	56	366	65	295	+230
R&D Services and Consulting						
Other R&D sources						
Other external sources						
<b>Total</b>	<b>309</b>	<b>597</b>	<b>705</b>	<b>948</b>	<b>1.021</b>	<b>+73</b>

*Number of projects and income in 2015*

Project Typology	Number of projects		Projects income		
	No.	Distribution	Total (k€)	Distribution	
Source of Funding	National Programmes - FCT	5	31%	190	19%
	National Programmes - QREN	3	19%	303	30%
	National Programmes – P2020				
	National Programmes - PICT

## G.2. International Conference Proceedings with scientific referees

1. Maxim, D, Soboczenski, F, Bate, I, Tovar, E, "Study of the Reliability of Statistical Timing Analysis for Real-Time Systems", 23rd International Conference on Real-Time Networks and Systems (RTNS 2015). 4 to 6, Nov, 2015, Main Track. Lille, France

2. Altmeyer, S, Davis, R, Indrusiak, L, Maiza, C, Nélis, V, Reineke, J, "A Generic and Compositional Framework for Multicore Response Time Analysis", 23rd International Conference on Real-Time Networks and Systems (RTNS 2015). 4 to 6, Nov, 2015, Main Track. Lille, France
3. Esper, A, Nelissen, G, Nélis, V, Tovar, E, "How realistic is the mixed-criticality real-time system model?", 23rd International Conference on Real-Time Networks and Systems (RTNS 2015). 4 to 6, Nov, 2015, Main Track. Lille, France
4. Burmyakov, A, Bini, E, Tovar, E, "An Exact Schedulability Test for Global FP Using State Space Pruning", 23rd International Conference on Real-Time Networks and Systems (RTNS 2015). 4 to 6, Nov, 2015, Main Track. Lille, France
5. Santos\_Jr, J, Lima, G, Bletsas, K, "Considerations on the Least Upper Bound for Mixed-Criticality Real-Time Systems", 5th Brazilian Symposium on Computing Systems Engineering, SBESC 2015 (SBESC 2015). 3 to 6, Nov, 2015. Foz do Iguaçu, Brasil
6. Li, Y, Salunkhe, H, Bastos, J, Moreira, O, Åkesson, B, Goossens, K, "Mode-Controlled Data-Flow Modeling of Real-Time Memory Controllers", 13th IEEE Symposium on Embedded Systems for Real-Time Multimedia (ESTIMedia 2015). 8 to 9, Oct, 2015. Amsterdam, Netherlands.
7. Robles, R, Lavendis, E, "Performance Model for MRC Receivers with Adaptive Modulation and Coding in Rayleigh Fading Correlated Channels with Imperfect CSIT", RTUWO Advances in Wireless and Optical Communications 2015 (RTUWO2015). 5 to 6, Oct, 2015. Riga, Latvia
8. Lindgren, P, Lindner, M, Lindner, M, Pereira, D, Pinho, L, "Abstract Timers and their Implementation onto the ARM Cortex-M family of MCUs", Embed with Linux Workshop (EWiLi 2015). 4 to 9, Oct, 2015. Amsterdam, Netherlands
9. Pedro, A, Pereira, D, Pinho, L, Pinto, J, "Monitoring for a decidable fragment of MTLD", The 15th International Conference on Runtime Verification (RV'15). 22 to 25, Sep, 2015. Vienna, Austria
10. Vahabi, M, Tennina, S, Tovar, E, Andersson, B, "Response Time Analysis of Slotted WiDOM in Noisy Wireless Channels", International Conference on Emerging Technologies and Factory Automation (ETFA 2015). 8 to 11, Sep, 2015, Industrial Communication Technologies and Systems. Luxembourg, Luxembourg
11. Robles, R, McLernon, D, Ghogho, M, "A Random Access Protocol incorporating Multi-Packet Reception, Retransmission Diversity and Successive Interference Cancellation", 8th International Workshop on Multiple Access Communications (MACOM2015). 3, Sep, 2015. Helsinki, Finland
12. Robles, R, Gameiro, A, "Multi-Objective and Financial Portfolio Optimization of Carrier-Sense Multiple Access Protocols with Cooperative Diversity", 8th International Workshop on Multiple Access Communications (MACOM2015). 3, Sep, 2015. Helsinki, Finland
13. Loureiro, J. R., R, Tovar, E, "Distributed Sensing of Fluid Dynamic Phenomena with the XDense Sensor Grid Network", IEEE International Conference on Cyber Physical Systems, Networks and Applications (CPSNA'15). 19 to 21, Aug, 2015. Hong Kong, China
14. Souto, P, Sousa, P, Davis, R, Bletsas, K, Tovar, E, "Overhead-aware schedulability evaluation of semi-partitioned real-time schedulers", IEEE 21st International Conference on Embedded and Real-Time Computing Systems and Applications (RTCSA 2015). 19 to 21, Aug, 2015
15. Nikolic, B, Bletsas, K, Petters, S, "Hard real-time multiprocessor scheduling resilient to core failures", 21st IEEE International Conference on Embedded and Real-Time Computing Systems and Applications (RTCSA 2015). 19 to 21, Aug, 2015, pp 122-131. Hong Kong, China
16. Robles, R, Gameiro, A, Pereira, N, "System Level Simulation and Radio Resource Management for Distributed Antenna Systems with Cognitive Radio and Multi-Cell Cooperation", 4th International Conference on Future Generation Communication Technologies (FGCT 2015). 29, Jul, 2015. Luton, United Kingdom
17. Fonseca, J, Nélis, V, Nelissen, G, Pinho, L, "Analysis of self-interference within DAG tasks", 6th Real-Time Scheduling Open Problems Seminar (RTSOPS 2015). 7, Jul, 2015. Lund, Sweden

18. Nelissen, G, Fonseca, J, Raravi, G, Nélis, V, "Timing Analysis of Fixed Priority Self-Suspending Sporadic Tasks", 27th Euromicro Conference on Real-Time Systems (ECRTS 2015). 7 to 10, Jul, 2015. Lund, Sweden.
19. Pinho, L, Moore, B, Michell, S, Taft, S, "An Execution Model for Fine-Grained Parallelism in Ada", 20th International Conference on Reliable Software Technologies - Ada-Europe 2015 (Ada-Europe 2015). 25 to 29, Jun, 2015. Madrid, Spain
20. Nelissen, G, Pereira, D, Pinho, L, "A Novel Run-Time Monitoring Architecture for Safe and Efficient Inline Monitoring", 20th International Conference on Reliable Software Technologies - Ada-Europe 2015 (Ada-Europe 2015). 22 to 26, Jun, 2015. Madrid, Spain
21. Baldovin, A, Zovi, A, Nelissen, G, Puri, S, "The CONCERTO methodology for model-based development of avionics SW", 20th International Conference on Reliable Software Technologies - Ada-Europe 2015 (Ada-Europe 2015). 22 to 26, Jun, 2015. Madrid, Spain
22. Ullah, S, Tovar, E, "Performance Analysis of IEEE 802.15.6 Contention-based MAC Protocol", The IEEE International Conference on Communications (IEEE ICC 2015). 8 to 12, Jun, 2015, IEEE ICC 2015 - Communications QoS, Reliability and Modeling. London, United Kingdom
23. Garibay-Martínez, R, Nelissen, G, Ferreira, L, Pedreiras, P, Pinho, L, "Holistic Analysis for Fork-Join Distributed Tasks supported by the FTT-SE Protocol", 11th IEEE World Conference on Factory Communication Systems (WFCS 2015). 27 to 29, May, 2015, TII-SS-2: Scheduling and Performance Analysis. Palma de Mallorca, Spain
24. Loureiro, J, R., R, Tovar, E, "XDense: A Dense Grid Sensor Network for Distributed Feature Extraction", XXXIII Simpósio Brasileiro de Redes de Computadores e Sistemas Distribuídos (SBRC 2015). 15 to 19, May, 2015, III Workshop de Comunicação em Sistemas Embarcados Críticos. Vitória, Brasil
25. Cerqueira, T, Albano, M, "RoutesMobilityModel: easy realistic mobility simulation using external information services", Workshop on ns-3 (WNS '15). 13, May, 2015. Castelldefels, Spain
26. Pinho, L, Moore, B, Michell, S, Taft, S, "Real-Time Fine-Grained Parallelism in Ada", International Real-Time Ada Workshop (IRTAW 2015). 20 to 22, Apr, 2015. Pownal, U.S.A
27. Fonseca, J, Nélis, V, Raravi, G, Pinho, L, "A Multi-DAG Model for Real-Time Parallel Applications with Conditional Execution", The 30th ACM/SIGAPP Symposium On Applied Computing (SAC 2015). 13 to 17, Apr, 2015, Embedded Systems. Salamanca, Spain
28. Nelissen, G, Pereira, D, Pinho, L, "Toward a Run-Time Verification Framework for Real-Time Safety-Critical Systems", SEMINAR “ACTION Temps Réel: Infrastructures et Services Systèmes”. 10, Apr, 2015. Brussels, Belgium
29. Gaur, S, "Bringing Context Awareness to IoT-Based Wireless Sensor Networks", IEEE International Conference on Pervasive Computing and Communications (PerCom). 23 to 26, Mar, 2015, PhD Forum. Saint Louis, U.S.A
30. Ali, H, Åkesson, B, Pinho, L, "Generalized Extraction of Real-Time Parameters for Homogeneous Synchronous Dataflow Graphs", 23rd Euromicro International Conference on Parallel, Distributed, and Network-Based Processing (PDP 2015). 4 to 6, Mar, 2015. Turku, Finland
31. Nélis, V, Yomsi, P, Pinho, L, Quiñones, E, Bertogna, M, Marongiu, A, Gai, P, Scordino, C, "A system model and stack for the parallelization of time-critical applications on many-core architectures", 3rd Workshop on High-performance and Real-time Embedded Systems (HIRES 2015). 21, Jan, 2015. Amsterdam, Netherlands

### G.3. Books (Author)

(Void)

#### G.4. Chapter/paper in Books

1. Raravi, G, Shingde, V, Ramamritham, K, "Automatic Merging of Vehicles: Design, Algorithms, Performance", Chapter in Studies in Computational Intelligence - Cooperative Robots and Sensor Networks 2015, Springer. 19, May, 2015, Volume 604, pp 231-255. DOI:10.1007/978-3-319-18299-5\_11
2. Robles, R, Gameiro, A, "Multi-Objective and Financial Portfolio Optimization of p-Persistent Carrier Sense Multiple Access Protocols with Multi-Packet Reception", Chapter in Communications in Computer and Information Science, Optimization in the Natural Sciences. 2015, Volume 499, pp 68-94. DOI:10.1007/978-3-319-20352-2\_5
